

## MANUAL DE PROMPTS 3D: ERA PREHISTÓRICA (ERA 0)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Luchador a Mano Limpia (Brawler\_Primitivo)

- **Prompt de Diseño 3D (Modelado):**

3D stylized character, low-poly game-ready unit for RTS, a primitive prehistoric brawler warrior. Barefoot, wearing a simple short brown fur loincloth. Athletic muscular build, hands and knuckles tightly wrapped in primitive leather strips, black tribal war paint on torso and face. T-pose or clean A-pose, symmetric mesh. PBR textures, clean StandardMaterial3D. Pivot point strictly at the soles of the feet (0,0,0). Include an untextured color mask section on the loincloth for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D character animation skeleton rig compatible with Mixamo/Godot SkeletonProfileHumanoid. Animation loops required: 1. Idle stance (breathing, boxing guard posture, bouncing slightly). 2. Walk cycle (aggressive forward stride at 4.2 m/s). 3. Run cycle (high velocity sprint). 4. Attack OneShot (furious ultra-fast alternating left and right punches, jaw strikes). 5. Stunned reaction (head shaking, dazed looping animation). All animations must support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55 meters distance.

#### 2. Aldeano Civil Masculino (Villager\_Male\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS civilian worker asset, low-poly male villager from the prehistoric age. Wearing a rustic dark fur tunic over one shoulder, tied with a raw leather cord. Weathered skin, wild unkempt hair, and a small woven fiber basket attached to the back node 'BackAttachment'. T-pose configuration, optimized topology for mobile mobile cross-play. Origin pivot fixed at (0,0,0) at the feet. Hand node 'RightHandAttachment' left empty to receive dynamic tools like axes or picks.

- **Prompt de Movimiento (Animación / Rigging):**

3D humanoid civilian animation set. Loops required: 1. Peaceful Idle (standing, wiping sweat, looking around). 2. Walk/Run cycle (plano XZ velocity-based blend). 3. Wood-Chopping loop (swinging a stone axe downward repeatedly). 4. Mining loop (swinging a stone pickaxe at ground level). 5. Gathering loop (kneeling, picking berries from a node). 6. Deposit resource animation (turning and lifting the basket). Smooth transitions at 8.0 delta factor.

#### 3. Aldeana Civil Femenina (Villager\_Female\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS civilian unit, prehistoric female villager. Wearing a simple asymmetrical short dress made of cured deerskin leather, tied at the waist with a thin vine. Braided coarse hair with small bone ornaments. Symmetric standing A-pose. StandardMaterial3D textures. Origin pivot point at the base of the feet (0,0,0). Features attachment sockets: 'RightHandAttachment' on the right palm and 'BackAttachment' on the back mesh for inventory stacking containers.

- **Prompt de Movimiento (Animación / Rigging):**

3D female humanoid animation loop library. Includes: 1. Idle (calm breathing, adjusting shoulder strap). 2. Walk/Run (smooth speed interpolation). 3. Farming/Gathering loop (bending forward, placing resources into back attachment). 4. Build/Repair animation (hammering motion with an invisible tool). 5. Fleeing animation (panicked run loop used when receiving damage). Character processing flags optimized for mobile rendering.

4. Guerrero con Garrote (Clubman\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS military infantry unit, a prehistoric clubman warrior. Muscular silhouette, wearing a wolf skin cloak over his back and shoulders, large bone necklace. Holding a massive, heavy wooden club studded with sharp animal bone splinters in his right hand. Stable standing guard stance. Low polygon layout. Pivot point at the bottom center of the feet (0,0,0). The wolf skin cape must feature a solid color section mapped to the player team bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D military combat animation matrix. Loops required: 1. Aggressive Idle (holding club over shoulder, breathing heavily). 2. Move blend (forward running with upper torso locked). 3. Attack OneShot (swinging the heavy club downward with high impact force). 4. Hold Ground posture (shielding head with left arm, static bracing). Synchronized via network RPC unreliable\_ordered parameters for zero visual delay.

5. Lancero de Sílex (Spearman\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, prehistoric flint spearman. Wearing light leather bands on chest and arms, wild hair. Holding a long wooden spear tipped with a sharp flint stone arrowhead bound tightly with animal tendons in his right hand. Symmetric A-pose mesh structure. Clean PBR textures. Origin pivot set flat at the ground plane center (0,0,0). The leather armbands must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D spear combat animation library. Loops required: 1. Combat Idle (spear pointed forward, knees bent in a low defensive stance). 2. March/Run (holding spear upright while running). 3. Attack OneShot (thrusting the spear forward with piercing thrusts). 4. Anti-Cavalry stance (bracing the spear butt against the ground pointing upward at a steep angle). Blended smoothly using a 1D blendspace node.

6. Héroe Chamán Tribal (Leader\_Prehistoric)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS hero character, a prehistoric tribal shaman leader. Wearing a hollow wolf skull as a helmet mask, an elaborate cloak of feathers and crow wings, tribal bone ornaments. Holding a tall gnarled wooden staff tipped with a glowing mystical amber stone and embers.

Majestic standing pose. High-quality StandardMaterial3D textures. Pivot at the center base of the feet (0,0,0). The feather cloak edges must map to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D hero/mystic animation controller set. Loops: 1. Majestic Idle (breathing, staff glowing, raising left hand). 2. March/Run (commanding forward movement). 3. Conversion/Spellcast loop (raising staff high, chanting, body shaking to invoke weather disasters/earthquakes). 4. Moral Aura wave (slamming the staff onto the ground to trigger a visual network shockwave). Full animation LOD scaling support.

---

## SECCIÓN 2: EDIFICACIONES Y LOGÍSTICA

### 7. El Capitolio / Centro Urbano (TownCenter\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, a prehistoric town center capitol. A clustered arrangement of circular primitive huts built from dark mud, covered by large conical thatched roofs made of dried straw and mammoth fur. Supported by massive ivory mammoth tusks and timber beams bound by vines. A central stone fire pit sits in the open courtyard. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Tribal leather flags hanging from the tusks must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D structural state animations and visual nodes. 1. Construction Phase: Hide final model, display 'Primitive\_Scaffold' (wooden poles, ropes, leather sheets) scaling vertically via Tween from 0% to 100%. 2. Active Idle: Central campfire emitting a continuous vertical smoke particle stream (VFX). 3. Damaged State: Emit fire and spark particles when health is below 50%. 4. Bell Alarm state: A large bone gong shaking back and forth when garrison alarm is triggered.

### 8. El Cuartel Primitivo (Barracks\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS military building, prehistoric barracks. A circular perimeter of vertical raw wooden logs and stakes tied with vines, enclosing an open training ground. Features a crude shelter canopy made of stretched mammoth hides held up by curved ivory bones. Weapon racks with stone spears and clubs inside the yard. PBR wood and hide textures. Pivot point centered at the ground floor plane (0,0,0). The primitive hide canopy borders must map to the bando team color channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D building animation logic. 1. Construction Loop: Scaffold mesh visible, adjusting visibility interpolation. 2. Production/Training trigger: A torch banner at the entrance gates flares up with emissive fire particles whenever a soldier unit is queued for training. 3. Destruction sequence: The log walls collapse outward using a fractured mesh or disappear via a fast dissolve shader when health drops to zero.

#### 9. La Choza de Población (House\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly building asset, a prehistoric tribal hut house. Conical shape structure made of interlocking thick wooden branches and covered entirely with heavy animal furs and leather pelts. A single small entrance flap door. Optimized low polycount for mobile RTS rendering. Clean StandardMaterial3D materials. Pivot point located at the absolute bottom center of the dirt ring floor (0,0,0). Include a vertical bone marker pole outside the door with a flag mapped to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D simple structural behavior. 1. Construction state: Simple branch skeleton model visible, filling up with leather hides progressively via a Tween alpha material modifier. 2. Active state: A small interior light source emitting a warm yellow glow through the entrance door flap. 3. Destroyed state: The structure collapses flat into a pile of ash particles and broken branches upon receiving lethal damage.

#### 10. La Granja Primitiva (Farm\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS resource node, a primitive prehistoric farm patch. A square area of dark tilled soil enclosed by crude rows of short sharpened wooden stakes and vines. Inside the plot, multiple rows of green wild berry bushes and prehistoric roots are visible growing out of the ground. Flat geometry on the Y axis. StandardMaterial3D texture mapping. Origin pivot point centered at the base floor plane. Crop rows must feature an independent mesh layer for dynamic depletion.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D resource depletion and growth animation states. 1. Resow/Construction: Empty dirt plot, wooden fence poles pop up from the ground with a quick spring Tween. 2. Gathering state: Green plants are visible. As the civilian extraction drains resource\_value, the crop meshes shrink scale down or toggle visibility layers sequentially. 3. Depleted state: Bare tilled soil mesh visible, triggers an interface alert for the player.

#### 11. La Torre de Vigilancia Trípode (Tower\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D stylized defense structure asset, prehistoric guard tower. A tall elevated triangular platform made of long thick timber logs bound together over a stable tripod frame base. Top deck features a protective railing made of bone plates and raw hides. Must feature a specific child node socket called ProjectileMuzzle located at the forward center of the top deck railing. Low-poly optimized. Pivot at ground center (0,0,0). The hide railing plates must map to the team color mask.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D tower combat functionality. 1. Active Idle: Top platform empty, overlooking the Fog of War. 2. Attack state: When an enemy enters the 32m range, the tower executes a synchronized ranged

logic, instancing a Projectile3D object at the ProjectileMuzzle global position. 3. Destruction: The tripod legs break in half, tilting the top platform downward into a cloud of dust particles.

#### 12. La Canoa de Tronco Vaciado (Canoa\_Madera\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS transport vehicle asset, a prehistoric wooden log dugout canoe boat. Formed from a single solid tree trunk, hollowed out rústicamente, showing rough wood texture and bark tool marks on the outer hull. Hollow interior layout with two simple wooden bench seats. Optimized for water navigation at Y=-1.8m depth. StandardMaterial3D textures. Pivot point at the exact geometric bottom center of the hull on the water line. The prow must feature a painted symbol for team color modulation.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D aquatic navigation vehicle animation matrix. Loops required: 1. Floating Idle (swaying gently on the water surface using a sine-wave displacement script). 2. Sailing/Move cycle (generating a double stream of water wake particles at the stern while moving at 5.5 m/s). 3. Cargo Garrison RPC logic: When a soldier node enters, hide unit mesh; upon rpc\_descargar\_todo(), expel units in a safe radius with random offsets.

#### 13. El Muelle de Troncos (Dock\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly coastal infrastructure building, a prehistoric harbor dock. A rustic walkway pier made of split tree trunks laid side-by-side, supported over the water by vertical log piles driven into the riverbed. Features a dirt ramp connecting the shoreline to the water line at Y=-1.8m. Low polycount. Pivot point fixed at the shore boundary base. A wooden tie-post on the pier must feature a braided rope coil and a tribal banner mapped to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D aquatic building functionality. 1. Construction phase: Wooden piles appear splashing into the water zone sequentially. 2. Active Marine Economy state: When a FishingBoat3D arrives with a full cargo of 20/20 food, the dock triggers a síncrona delivery animation, producing a small water ripple VFX, clearing the boat's inventory and adding the food points to the GlobalResourceManager.

---

### SECCIÓN 3: FAUNA Y CRIATURAS SALVAJES

#### 14. El Mamut Lanudo (Mammoth\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D massive prehistoric creature asset, low-poly wild mammoth. Huge bulky body covered in dense, shaggy dark-brown layered fur textures. Gigantic curved ivory tusks sweeping outward and upward, a long muscular trunk. Low polygon count layout optimized for mobile RTS performance.

Clean StandardMaterial3D textures. Origin pivot point fixed flat at the bottom center of its four heavy feet on the ground plane (0,0,0). Maps to the resource\_type = "food" group with 350 units of meat.

- **Prompt de Movimiento (Animación / Rigging):**

3D large quadrupede quadrupedal animal animation rig. Loops: 1. Passive Idle (heavy slow breathing, swinging trunk left and right, shifting weight). 2. Walk cycle (slow, heavy stomping gait making the ground shake). 3. Attack/Charge animation (rearing up on hind legs, trumpeting with trunk raised, smashing front feet downward). 4. Death sequence (collapsing heavily onto its side, turning into a harvestable meat carcass mesh). Processing ticks limited by distance LOD.

15. El Tigre Dientes de Sable (Sabertooth\_Era0)

- **Prompt de Diseño 3D (Modelado):**

3D predatory wild animal asset, low-poly prehistoric saber-toothed tiger tiger. Sleek muscular feline build with a light caqui striped fur pattern texture. Features two prominent, razor-sharp elongated canine tusks protruding downward past its lower jaw. Low polycount optimized for RTS camera distances. Pivot point centered under the body on the floor plane (0,0,0). Registered with the is\_aggressive = true state variable for hostile ambush logic.

- **Prompt de Movimiento (Animación / Rigging):**

3D predatory feline quadrupede animation set. Loops: 1. Hostile Idle (low crouching posture, tail twitching, growling head movement). 2. Stalking Walk (low, stealthy movement close to the ground). 3. Prowling Run/Charge (extremely fast bounding sprint at 7.5 m/s). 4. Attack loop (leaping forward, slashing with front claws, biting downward). 5. Reaction (reacting to hunter spears with a short recoil flinch). Zero blend space tirones.

---

💡 ¿Cómo usar esta información de forma óptima?

Puedes copiar directamente cualquiera de estos bloques y pegarlos en tu IA generativa de assets 3D.

- **Los prompts de Diseño** te darán la forma, texturas y estructura del archivo .gltf/.glb.
- **Los prompts de Movimiento** te indican cómo estructurar el esqueleto (*Rig*) en Blender o qué nombres de animaciones debes programar en el AnimationTree de tu juego para que la lógica de estados (StateIdle3D, Attacking, Gathering) los reproduzca en red con un impecable **EXIT CODE 0**.

¿Quieres que prepare ahora el **manual de doble prompt para el siguiente bloque tecnológico (Edad de Bronce e Hierro)**, o prefieres hacer pruebas con este set de la prehistoria?

## MANUAL DE PROMPTS 3D: EDAD DE PIEDRA (ERA 1)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Hostigador a Distancia (Lanzador\_Piedras)

- **Prompt de Diseño 3D (Modelado):**

3D stylized character, low-poly game-ready military unit for RTS, a Stone Age stone-thrower skirmisher. Wearing a rough light grey hemp tunic tied with a simple vine belt. Holding a woven plant-fiber sling in the right hand and carrying a leather pouch filled with smooth spherical stones on the hip. T-pose or clean A-pose, symmetric mesh. PBR textures, clean StandardMaterial3D. Pivot point strictly at the soles of the feet (0,0,0). Include an untextured color mask section on the pouch for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D character animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Idle stance (alert breathing, balancing sling in hand). 2. Walk cycle (light footing forward stride at 4.5 m/s). 3. Attack OneShot (whirling the sling overhead horizontally in a fast loop, then snapping forward to release the projectile). 4. Hit reaction (short flinch). All animations must support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55 meters distance.

#### 2. Guerrero con Maza (Maceman\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS infantry unit, a Stone Age maceman warrior. Wearing a basic chest guard made of hardened layered thick leather bands. Holding a heavy wooden mace with a perfectly perforated spherical stone head fixed to the top in his right hand. Stable standing guard stance. Low polygon layout. Pivot point at the bottom center of the feet (0,0,0). The leather chest armor must feature a solid emblem section mapped to the player team bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D military combat animation matrix. Loops required: 1. Aggressive Idle (holding stone mace ready in front, breathing heavily). 2. Move blend (forward running with weapon raised). 3. Attack OneShot (swinging the stone mace diagonally downward with high smashing force). 4. Defend posture (raising the mace shaft to parry incoming strikes). Synchronized via network RPC unreliable\_ordered parameters for zero visual delay.

#### 3. Guerrero con Hacha (Axeman\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, Stone Age axeman. Wearing light leather armbands and a basic animal pelt skirt. Holding a heavy wooden handle axe fitted with a sharp, beveled double-edged stone head bound with tight leather cords. Symmetric A-pose mesh structure. Clean PBR textures. Origin pivot set flat at the ground plane center (0,0,0). The kilt border must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D axe combat animation library. Loops required: 1. Combat Idle (legs spread wide, axe held with both hands in a heavy low guard). 2. March/Run (holding axe over the shoulder while charging). 3. Attack OneShot (swinging the heavy stone axe horizontally in a wide cleaving arc). 4. Taunt animation (raising the axe high with both hands, shouting). Blended smoothly using a 1D blendspace node.

4. Arquero de Piedra (Bowman\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS ranged unit, a Stone Age archer. Light agile build, wearing a simple single-shoulder cloth tunic. Equipped with a simple curved wooden self-bow in the left hand and a leather quiver with flint-tipped arrows attached to the back node 'BackAttachment'. Flat ground base geometry. Pivot point at the bottom center of the feet (0,0,0). The quiver bindings must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D bow combat functionality. Loops required: 1. Ranged Idle (holding bow unstrung, scanning the Fog of War). 2. Move blend (running forward while holding the bow across the chest). 3. Attack OneShot (drawing an arrow from the quiver, pulling the bowstring back fully, holding for a split second, and firing). Instances a Projectile3D object at the ProjectileMuzzle global position sync over network.

5. Explorador a Pie (Scout\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS scout unit, Stone Age foot scout. Sleek athletic runner build, minimal light clothing, leather sandals. Holding a long lightweight wooden staff or wooden spear for balancing in his right hand. Symmetric standing A-pose. StandardMaterial3D textures. Origin pivot point at the base of the feet (0,0,0). Features enhanced vision radius attributes, shoulder sash must use a separate material channel for team color modulation.

- **Prompt de Movimiento (Animación / Rigging):**

3D runner humanoid animation loop library. Includes: 1. Idle (crouched low, panting, scanning horizons with right hand over eyes). 2. Walk/Run (extremely fast sprint loop at 6.8 m/s with long strides). 3. Fleeing animation (high-speed evasive running). 4. Death sequence (tripping and sliding forward on the ground). Character processing flags optimized for fast mobile rendering.

6. Profeta de Piedra (Prophet\_Stone)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS mantic hero character, a Stone Age mystical prophet. Wearing long ceremonial grey drapes, elaborate chalk white ritual body paint lines, and carrying a tall gnarled staff topped with an engraved runic stone tablet. Majestic standing pose. High-quality StandardMaterial3D

textures. Pivot at the center base of the feet (0,0,0). The lower dress border must map to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D prophet/mystic animation controller set. Loops: 1. Mystic Idle (staff floating slightly, chanting motion, eyes closed). 2. March/Run (calm calculated strides). 3. Conversion/Spellcast loop (pointing the runic stone staff at an enemy vehicle or unit, generating a channeling stance). 4. Weather Disaster OneShot (slamming the stone staff down to trigger earthquakes/plagues DoT). Full animation LOD scaling support.

---

## SECCIÓN 2: EDIFICACIONES Y FORTIFICACIONES

### 7. El Centro Urbano / Capitolio (TownCenter\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, a Stone Age town center capitol. A structured layout of large clay adobe houses reinforced with heavy grey river stone foundations. Covered by clean conical thatched straw roofs. Connected by a small central courtyard featuring a communal stone well node. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Hanging woven cloths on the adobe walls must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D structural state animations and visual nodes. 1. Construction Phase: Hide final model, display 'Primitive\_Scaffold' (interlocking wooden log beams, ropes, ladders) scaling vertically via Tween from 0% to 100%. 2. Active Idle: Small chimneys on the adobe roofs emitting a light smoke particle stream (VFX). 3. Damaged State: Emit structural dust and debris particles when health is below 50%.

### 8. El Cuartel de Hacha (Barracks\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS military building, Stone Age barracks. An elevated square perimeter constructed from vertical thick wooden planks cut neatly with stone axes, topped with cane thatched roofing. Open mud training field inside with a rack storing stone axes, clubs, and training dummies. PBR textures. Pivot point centered at the ground floor plane (0,0,0). The entrance torch banners must map to the bando team color channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D building animation logic. 1. Construction Loop: Scaffold mesh visible, adjusting visibility interpolation based on progression data. 2. Production trigger: A central signal bonfire at the yard flares up with bright orange embers whenever a soldier unit is queued for training. 3. Destruction sequence: The wooden plank walls fracture and collapse downward into a smoke cloud when health hits zero.

#### 9. El Corral / Establo Primitivo (Stable\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly building asset, a Stone Age cavalry corral stable. Open rectangular enclosure fenced by split horizontal log rails tied to vertical stone pillars. Features a small wooden shelter canopy with straw roofing and stone feeding troughs inside. Optimized low polycount for mobile RTS. Clean StandardMaterial3D materials. Pivot point located at the absolute floor plane center (0,0,0). Include an alliance flag pole at the gate mapped to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D simple structural behavior. 1. Construction state: Fencing rails snap up from the ground sequentially via a Tween animation. 2. Active state: Small dust particles emitting from the corral floor simulating animal activity inside. 3. Destroyed state: The wooden fences break apart into a debris particle cluster upon receiving lethal damage.

#### 10. El Templo / Menhir Sagrado (Temple\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS teocratic building, a Stone Age holy temple menhir. A monumental, tall vertical standing monolithic stone block carved with primitive geometric runes. Surrounded at the base by a circular arrangement of smaller stone blocks and a sacred stone brazier with an active fire pit. Flat geometry. StandardMaterial3D texture mapping. Origin pivot point centered at the base floor plane. The glowing runic engravings must use an emissive mask channel mapped to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D mystic structure behavior. 1. Construction loop: The central monolith slowly rises out of the ground via a vertical position Tween as progress reaches 100%. 2. Faith Generation state: Active idle state where the runic engravings pulse with a soft glow, generating +5/s faith resource points to the GlobalResourceManager. 3. Shatter state: The monolith cracks and splits into stone fragments upon destruction.

#### 11. La Torre Cuadrada (Tower\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D stylized defense structure asset, Stone Age guard tower. A tall square watchtower built from heavy interlocking vertical logs, reinforced with a sturdy base of dry mampostería masonry stone blocks. Top observation platform features a wooden railing. Must feature a specific child node socket called ProjectileMuzzle located at the forward center of the top platform deck. Low-poly optimized. Pivot at ground center (0,0,0). Defensive flags hanging from the deck must map to the team color mask.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D tower combat functionality. 1. Active Idle: Empty watchtower platform, scanning terrain. 2. Attack state: Executes synchronized ranged logic, instancing a Projectile3D stone object at the

ProjectileMuzzle global position targeting enemy units. 3. Destruction: The stone base fractures, tilting the wooden superstructure until it collapses into a dust particle cloud.

#### 12. La Empalizada Afilada (Wall\_Wood\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D modular fortification asset, a Stone Age wooden palisade wall segment. A tight rows of tall, vertical sharpened logs driven deep into the ground, reinforced with horizontal timber crossbeams and rope bindings. Low polygon layout optimized for modular auto-tiling grid placement in Godot 4.3. StandardMaterial3D textures. Pivot point at the exact bottom center floor plane. Top vine ties must map directly to the player team color slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular wall behavior. 1. Placement state: The log segments slam down into the dirt grid with a quick screen-shake or dust puff VFX. 2. Gate interaction (if upgraded): Logs slide sideways or a portón segment pivots open smoothly when allied units approach. 3. Collapse state: Logs splinter and break apart when health reaches 0.

---

### SECCIÓN 3: FAUNA Y NODOS DE RECURSOS

#### 13. El Bisonte de Estepa (WildBison\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D wild animal asset, low-poly steppe bison creature. Massive muscular silhouette with a heavy hump over the shoulders, covered in thick shaggy dark brown woolly fur on the front quarters. Short curved sharp horns. Low polygon count layout optimized for mobile performance. Clean StandardMaterial3D textures. Origin pivot point fixed flat at the bottom center of its four hooves on the ground plane (0,0,0). Maps to the resource\_type = "food" group with 450 units of harvestable meat.

- **Prompt de Movimiento (Animación / Rigging):**

3D heavy quadrupede animal animation rig. Loops: 1. Passive Idle (grazing, chewing, heavy slow breathing, swishing tail). 2. Walk cycle (slow steady rhythmic walk). 3. Aggressive Charge (lowering head, scraping the dirt with a front hoof, then sprinting forward at high speed to ram target). 4. Death sequence (falling over heavily onto its flank, switching to a meat carcass mesh). Processing limited by distance LOD.

#### 14. La Gacela Veloz (Gazelle\_Era1)

- **Prompt de Diseño 3D (Modelado):**

3D wild animal asset, low-poly agile plains gazelle. Slender light body frame, elegant tan and white short fur pattern texture, thin twisted horns. Low polycount highly optimized for RTS camera distances. Pivot point centered under the body on the floor plane (0,0,0). Registered with the pasive fauna group for hunting. Fear reaction enabled.

- **Prompt de Movimiento (Animación / Rigging):**

3D agile quadrupede animal animation set. Loops: 1. Passive Idle (alert standing, ears twitching, head snapping up to sniff the air). 2. Walk cycle (graceful light footsteps). 3. Fleeing Gallop (extremely fast bounding leaps and zig-zag running away from units at 8.5 m/s). 4. Death sequence (collapsing quickly into a harvestable meat node). Alpha processing flags optimized for mobile rendering.

## MANUAL DE PROMPTS 3D: EDAD DE BRONCE (ERA 2)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Gladiador con Red y Tridente (Retiarius\_Gladiador)

- **Prompt de Diseño 3D (Modelado):**

3D stylized character, low-poly game-ready military infantry unit for RTS, a Bronze Age Retiarius gladiator. Wearing a heavy bronze manica arm guard on the left shoulder and arm, a simple leather subligaculum loincloth. Bare torso with distinct battle scars. Holding a sharp three-pronged bronze trident in the right hand and a folded heavy rope weighted net in the left hand. T-pose or clean A-pose, symmetric mesh. PBR textures, clean StandardMaterial3D. Pivot point strictly at the soles of the feet (0,0,0). Include an untextured color mask section on the loincloth cloth for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D character animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Idle stance (crouched combat guard, spinning the net slowly in hand). 2. Walk cycle (cautious, tactical lateral steps at 4.2 m/s). 3. Attack OneShot (thrusting the bronze trident forward in a quick double pierce). 4. Net Throw Special (unfurl and cast the net forward in a wide Area3D projectile motion to trigger the 50% Net Slowdown state on enemies). All animations support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55m distance.

#### 2. Piquero Antigregario (Piquero\_AntiGregario)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS infantry unit, a Bronze Age anti-cavalry pikeman soldier. Wearing a light bronze pectoral chest disc plate over a linen tunic, and an archaic bronze skull cap helmet. Holding an exceptionally long, thick wooden pike shaft tipped with a heavy leaf-shaped bronze arrowhead blade in his right hand. Stable standing guard stance. Low polygon layout. Pivot point at the bottom center of the feet (0,0,0). The linen tunic fabric must feature a solid color segment mapped to the player team bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D military spear/pike combat animation matrix. Loops required: 1. Guard Idle (bracing the massive pike forward at a 45-degree angle, knees bent). 2. Move blend (marching forward holding the heavy pike upright). 3. Attack OneShot (performing powerful thrusts forward with long range). 4. Anti-Vehicle/Cavalry Bracing (slamming the butt of the pike into the ground, locking it to apply the x3.5 multiplier against group 'vehicles\_3d' or 'chariots'). Synchronized via network RPC parameters.

### 3. Hoplita de Falange (Hoplite\_Bronze)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, Bronze Age Greek hoplite elite heavy infantry. Wearing a polished bronze corinthian helmet with a dark hair plume crest, bronze muscle cuirass armor, and bronze grebas leg guards. Holding a short bronze dory spear in the right hand and a large, heavy circular bronze aspis shield covering the torso in the left hand. Symmetric A-pose mesh structure. Clean PBR textures. Origin pivot set flat at the ground plane center (0,0,0). The hoplite helmet crest and a prominent crest shield decal must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D heavy infantry combat animation library. Loops required: 1. Falange Idle (holding the shield locked tight to the left chest, spear poking over the top rim). 2. March/Run (heavy steady jog maintaining formation). 3. Attack OneShot (short, precise overhand spear thrusts from behind the shield wall). 4. Block posture (locking shields together with nearby nodes to activate the Falange - 30% ballistics damage reduction). Blended smoothly using a 1D blendspace node.

### 4. Arquero Compuesto (CompositeBowman\_Era2)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS ranged unit, a Bronze Age composite archer. Athletic build, wearing an egyptian-style linen faldellín kilt. Equipped with an advanced curved composite bow made of laminated dark wood, horn, and sinew layers in the left hand, and a bronze quiver with arrows attached to the back node 'BackAttachment'. Flat ground base geometry. Pivot point at the bottom center of the feet (0,0,0). The fabric kilt waist belt must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D advanced bow combat functionality. Loops required: 1. Ranged Guard Idle (bow held ready, string slightly taut). 2. Move blend (running fluidly while keeping an arrow notched across the bow grip). 3. Attack OneShot (snapping an arrow from the back container, pulling the rigid composite bow string back with deep tension, and releasing a fast arrow projectile). Instances a Projectile3D object at the ProjectileMuzzle global position.

### 5. Sacerdote de Bronce (Priest\_Bronze)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS mystic/theocratic character, a Bronze Age high priest. Wearing an elegant long pleated white linen robe, a golden pectoral medallion, and carrying a tall polished bronze scepter topped with an ornate loop and an embedded lapislázuli crystal stone. Majestic standing pose. High-quality StandardMaterial3D textures. Pivot at the center base of the feet (0,0,0). The ceremonial golden sinto cloth hanging from the waist must map to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D priest/healer animation controller set. Loops: 1. Healing Idle (holding scepter forward, emitting soft cyan pulse ripples from the crystal tip to heal allied units in range). 2. March/Run (dignified calculated steps). 3. Conversion loop (raising the bronze scepter high towards an enemy building or bot, chanting, body trembling as the conversion meter fills). 4. Death sequence (dropping scepter, collapsing backward). Full Animation LOD scaling support.

---

## SECCIÓN 2: EDIFICACIONES Y MERCADO

### 6. El Palacio / Centro Urbano (TownCenter\_Era2)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, a Bronze Age palace town center capitol. An imposing mesopotamian/egyptian inspired palace made of dark red adobe sun-dried bricks, featuring grand entryways lined with massive smooth cylindrical white columns and painted golden geometric patterns. Features a wide flat roof deck and banners hanging down. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Hanging banners on the front columns must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D structural state animations and visual nodes. 1. Construction Phase: Hide final model, display 'Primitive\_Scaffold' (dense wooden scaffolding grids, ropes, copper tools, lifting pulleys) scaling vertically via Tween from 0% to 100%. 2. Active State: Braziers at the entrance emitting constant flame and smoke particles (VFX). 3. Damaged State: Cracks open on the adobe bricks, emitting structural debris when health is below 50%.

### 7. El Mercado Comercial (Market3D)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly building asset, a Bronze Age commercial market bazaar. Composed of a central stone pavilion hub structure surrounded by multiple external merchant stalls, wooden tables, and woven fabric canopies/tolds of vibrant patterns. Scattered crates, jars of spices, and clay pots sit around the bazaar floor. Low polycount optimized for mobile crossplay. Clean StandardMaterial3D materials. Pivot point located at the absolute floor plane center (0,0,0). The central striped fabric canopy must map directly to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D economic structure behavior. 1. Construction state: Stone pillars rise, fabric canopies unroll and snap into place via a spring Tween animation. 2. Active Trade state: When the trade\_executed signal triggers a 2:1 resource swap through GlobalResourceManager, a small flashing gold coin particle effect (VFX) floats up from the market roof, confirming the transaction. 3. Destroyed state: Canopies rip apart and stalls shatter into timber splinters.

#### 8. La Maravilla / Zigurat (Wonder\_Era2)

- **Prompt de Diseño 3D (Modelado):**

3D monumental low-poly RTS building asset, a Bronze Age wonder zigurat. A massive pyramid structure built out of layered terraces of baked mud-bricks, featuring grand symmetrical ceremonial central stairs leading to a golden top sanctuary shrine temple. Large fire braziers lit at the corners. Flat ground geometry. StandardMaterial3D textures. Origin pivot point centered at the absolute base of the structure (0,0,0). The huge vertical banners on the sanctuary facade must map directly to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D epic structure behavior and countdown state. 1. Construction phase: Requires massive resources, scaffold towers envelope the pyramid, expanding blocks step by step. 2. Active Wonder Countdown state: When completed, triggers the síncrona RPC 10-minute timer. The top shrine emits a massive continuous beam of emissive golden light particles pointing to the sky, alerting all 8 slots in the match. 3. Destruction: Triggers immediate match loss, model breaks into stone dust.

#### 9. La Herrería de Bronce (Blacksmith\_Era2)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS workshop building, Bronze Age blacksmith. A stone-walled foundry house featuring an open smelting furnace chamber with a bright emissive orange liquid bronze crucible pool inside. An anvil block, copper bellows, and weapon cooling racks with shields and swords are visible outside the forge shed. PBR wood, bronze, and stone textures. Pivot point centered at the ground floor plane (0,0,0). The forge awning canvas must map to the bando team color channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D industrial building animation logic. 1. Active Smelting state: The furnace furnace fires pulse with bright heat, emitting heat distortion shaders and smoke particles from the stone chimney. 2. Technology Research state: When an attack/defense upgrade is active, an automated hammer tool executes a regular pounding animation on the anvil block, playing metallic SFX. 3. Destruction: The smelting crucible collapses, triggering a fire explosion.

#### 10. La Muralla de Ladrillo (Wall\_Era2)

- **Prompt de Diseño 3D (Modelado):**

3D modular fortification asset, a Bronze Age adobe brick wall segment. Thick sturdy wall segment made of interlocking rectangular blocks of baked clay yeso bricks, topped with a flat walkway path

and a short crenellated breastwork. Low polygon layout optimized for modular auto-tiling grid placement in Godot 4.3. StandardMaterial3D textures. Pivot point at the exact bottom center floor plane. A painted decorative line across the brick facade must map directly to the player team color slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular wall behavior. 1. Placement state: The brick block slams down into the terrain grid with a dust puff and stone rumble VFX. 2. Gate interaction: The wall segment lowers into the ground or a heavy sliding portón opens when allied units approach, verifying the alliance matrix. 3. Destruction: The brick masonry collapses into rubble fragments.

---

### 🚩 SECCIÓN 3: VEHÍCULOS Y LOGÍSTICA DE RED

#### 11. El Carro de Guerra Primitivo (Carro\_Primitivo\_Era2)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly vehicle asset, a Bronze Age chariot war carriage. Consists of a light open-backed wicker and wooden chassis carriage frame riding on two large spoked bronze wheels, connected via a central pole rig to two stylized muscular brown warhorses. A low-poly soldier placeholder holding reins stands inside. Optimized for fast movement. StandardMaterial3D textures. Pivot point centered on the ground line between the two wheels (0,0,0). The front carriage shield plate must feature a crest mapped to the player team bando color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D mobile chariot vehicle animation matrix. Loops required: 1. Idle (horses shaking heads, stamping hooves, chariot swaying slightly). 2. Gallop/Move cycle (horses executing high-speed galloping loop, chariot wheels rotating rapidly, generating a continuous dust stream particle VFX behind the tracks at 5.5 m/s). 3. Combat impact: Wheels emit splinter effects when hit by group 'vehicles\_3d' counters like piqueros.

#### 12. La Galera Fenicia de Guerra (Galera\_Fenicia\_Era2)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS naval vessel asset, a Bronze Age Phoenician war galley galley. Long slender wooden hull with a row of ten low-poly oars protruding from the sides, and a single tall central mast with a large square cloth sail rigged. Features a primitive bronze ramming espolón tip at the prow water line. Optimized for aquatic navigation at Y=-1.8m depth. StandardMaterial3D textures. Pivot point at the geometric bottom center of the hull on the water line. The square sail canvas must map entirely to the team color bando channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D naval navigation animation. Loops: 1. Floating Idle (swaying on water shader using sine-wave angles). 2. Sailing/Move cycle (oars rowing in a synchronized rhythmic back-and-forth loop, sail billowing forward, generating a prominent white foam wake particle trail at the bow and stern

while navigating at 6.5 m/s). 3. Destruction: Hull cracks in half, sail tearing, vessel sinking below the water line.

## MANUAL DE PROMPTS 3D: EDAD DE HIERRO (ERA 3)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Espadachín de Hierro (Espadachin\_Hierro)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS game asset, low-poly historical infantry soldier, a classic Iron Age swordsman. Wearing a clean iron muscle cuirass armor, iron pauldrons, iron greaves, and an archaic iron skull cap helmet. Holding a straight iron gladius sword in the right hand and a wooden rectangular scutum shield in the left hand. Clear A-pose, symmetric body structure. Low-poly optimized, clean vertex colors. Origin pivot point exactly at the base of the feet (0,0,0). Include a dedicated material slot on the shield surface for dynamic team color modulation.

- **Prompt de Movimiento (Animación / Rigging):**

3D character animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Idle stance (alert military guard, holding shield close to chest). 2. Walk cycle (disciplined, synchronous legionary march at 4.0 m/s). 3. Attack OneShot (swift forward thrust with the gladius from behind the shield). 4. Hit reaction (shield flinch block). All animations support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55m distance.

#### 2. Legionario Romano (Legionary\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, Iron Age Roman legionary. Wearing detailed iron lorica segmentata plate armor, iron bracers, galea helmet with a short hair crest, and holding an iron-tipped pilum javelin in the right hand. Left hand holds a large red curved scutum shield. Symmetric standing A-pose mesh structure. Clean PBR textures. Origin pivot set flat at the ground plane center (0,0,0). The helmet crest and shield rim must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D disciplined infantry animation matrix. Loops required: 1. Testudo Guard Idle (locking shield upward and forward to create a tight defensive roof box). 2. March/Run (heavy steady jog maintaining rank formation). 3. Attack OneShot (throwing the pilum javelin in a fast horizontal projectile motion to instantiate a Projectile3D object, then drawing a gladius). Blended smoothly using a 1D blendspace node.

### 3. Arquero de Tiro Largo (Arquero\_TiroLargo)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS ranged unit, an Iron Age imperial longbowman archer. Wearing a light linen tunic and a leather brigandine vest with iron studs. Equipped with a large, rigid curved wooden longbow in the left hand and an iron-rimmed quiver with iron-tipped arrows attached to the back node 'BackAttachment'. Flat ground base geometry. Pivot point at the bottom center of the feet (0,0,0). The fabric waist belt must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D longbow combat functionality. Loops required: 1. Ranged Guard Idle (bow held horizontally, arrow notched, scanning terrain). 2. Move blend (running forward while holding the bow across the chest). 3. Attack OneShot (drawing an arrow from the quiver, pulling the bowstring back fully to the ear with high tension, and firing). Instances a Projectile3D object at the ProjectileMuzzle global position sync over network.

### 4. Centurión Comandante (Centurion\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS hero/officer character, an Iron Age Centurion leader. Wearing an ornate iron muscle coraza cuirass with silver phalerae medals, a flowing fabric cape, and a transverse red plume crest helmet. Holding an iron spatha sword in his right hand. Majestic standing pose. High-quality StandardMaterial3D textures. Pivot at the center base of the feet (0,0,0). The flowing military cape must map entirely to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D officer animation controller set. Loops: 1. Aura Idle (raising sword high, cape billowing slightly in the wind, emitting a soft leadership glow). 2. March/Run (commanding forward movement). 3. Moral Boost OneShot (slaming the sword onto the shield rim to trigger a visual network shockwave, applying attack speed modifiers to nearby group 'player\_units'). Full animation LOD scaling support.

---

## SECCIÓN 2: EDIFICACIONES Y MAQUINARIA DE ASIEDO

### 5. El Foro / Centro Urbano (TownCenter\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, an Iron Age imperial foro town center capitol. A grand classical forum architectural layout built from pristine white marble columns, terracotta tiled roofs, and a central open ágora courtyard with a carved stone fountain node. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Hanging vexillum banners on the front columns must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D structural state animations and visual nodes. 1. Construction Phase: Hide final model, display 'Industrial\_Scaffold' (thick wooden grids, cranes, lifting pulleys, iron chains) scaling vertically via Tween from 0% to 100%. 2. Active State: Fire braziers at the forum steps emitting smoke particles (VFX). 3. Damaged State: Columns fracture and shatter, emitting stone dust when health is below 50%.

#### 6. El Ariete de Carnero (Ariete\_Carnero\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly historical siege weapon asset, an Iron Age battering ram on wheels. Sturdy rustic wooden frame structure supporting a suspended massive log beam by ropes. The front head of the ram beam is carved from solid cast iron into the detailed shape of a ramming sheep head. Four heavy thick wooden wheels at the base. Optimized low polygon mesh, clean PBR wood and iron textures. Pivot point at the center base on the floor (0,0,0). The wooden shield canopy sides must feature clean vertical banners for dynamic team color texture overlay.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D siege vehicle locomotion matrix. Loops required: 1. Idle (wheels static, frame creaking). 2. Move cycle (four wooden wheels rotating smoothly, generating dirt dust particles behind the tracks at 3.0 m/s). 3. Attack OneShot (the suspended log beam pulls back heavily and rams forward with high impact momentum, playing a solid wood-on-stone impact crack VFX when hitting group 'enemy\_buildings').

#### 7. Catapulta Onagro (Catapulta\_Onagro\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS siege artillery asset, an Iron Age Onager catapult. Heavy oak wood timber chassis riding on four solid spoked wheels, featuring a large vertical torsion rope bundle and a single powerful throwing arm ending in a hollowed stone bowl. Holds a large spherical rock model inside the bowl. StandardMaterial3D textures. Pivot point at the absolute floor plane center (0,0,0). The lateral frame structural plates must feature a team color banner mapped to the player bando.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D mechanical machine animation. 1. Active Idle: Arm locked down under tension, ready to fire. 2. Move cycle (wheels rotating, heavy chassis swaying slightly). 3. Attack OneShot (the throwing arm snaps violently upward until it hits the padded stop bar, launching the rock projectile into a high-arc parabolic path, producing a friction rope snap VFX). 4. Reload loop (winch rotating to pull the arm back down).

#### 8. Balista de Torsión (Balista\_Torsión\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D stylized siege artillery structure, an Iron Age Ballista. A heavy wooden tripod base supporting a dual-arm torsion mechanism with iron winches and a long central slider track holding a massive iron-tipped wooden bolt virote. Must feature a specific child node socket called ProjectileMuzzle

located at the forward tip of the slider track. Low-poly optimized. Pivot at ground center (0,0,0). Support banners must map to the team color mask.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D ballista mechanical functionality. 1. Active Idle: String drawn back fully under mechanical winch tension. 2. Attack state: The slider releases the massive bolt, the string snaps forward violently, instancing a heavy Projectile3D bolt object at the ProjectileMuzzle position with high horizontal velocity. 3. Destruction: The main bow arms snap and splinter into timber fragments.

---

## SECCIÓN 3: LOGÍSTICA NAVAL Y ELEFANTES DE GUERRA

### 9. El Trirreme Romano (Trirreme\_Romano\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS naval warship asset, an Iron Age Roman Trireme galera. Long wooden military hull featuring three distinct rows of low-poly wooden oars protruding from the sides, and a tall mast with a large square crimson fabric sail rigged. Front features a massive sharp solid bronze espolón ramming beak at the water line. Optimized for aquatic navigation at Y=-1.8m depth. Pivot point at the geometric bottom center on the water line. The massive square sail must map entirely to the team color bando channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D naval navigation animation matrix. Loops required: 1. Floating Idle (swaying gently on water shader using soft sine-wave angles). 2. Sailing/Move cycle (all three rows of oars moving in a highly rapid, synchronized fluid rowing loop, sail billowing forward, generating a massive split foam wake particle trail at the bronze ramming prow while navigating at 7.0 m/s). 3. Ramming impact: Emits water splash and wood splinter VFX upon collision.

### 10. Elefante de Guerra (WarElephant\_Era3)

- **Prompt de Diseño 3D (Modelado):**

3D heavy living cavalry unit asset, an Iron Age War Elephant creature. Massive African elephant model covered in protective iron scale armor bardas on its head and flanks. Supporting a small fortified rustic wooden tower torreta on its back holding a tiny low-poly archer placeholder. Low polygon count optimized for RTS distances. Clean StandardMaterial3D textures. Origin pivot point fixed flat under its four massive feet on the ground plane (0,0,0). Belonging to group 'vehicles\_3d' due to its mechanical mass properties.

- **Prompt de Movimiento (Animación / Rigging):**

3D heavy quadrupede animation rig. Loops: 1. Passive Idle (swaying head, swinging trunk, stomping feet restlessly). 2. Move cycle (powerful, heavy shaking run gait at 5.5 m/s making the camera shake slightly via screen-shake alerts). 3. Attack OneShot (rearing up on hind legs, trumpeting loudly, and smashing its massive iron-clad head and tusks downward to apply huge melee damage and a 1.2m RVO separation push back to infantry nodes).

---

## SECCIÓN 4: FORTIFICACIONES

### 11. La Muralla de Sillar (Wall\_Iron)

- **Prompt de Diseño 3D (Modelado):**

3D modular fortification asset, an Iron Age sillar stone wall segment. High majestic wall made of perfectly interlocking heavy blocks of dressed grey sillar stone, featuring a wide upper battlements walkway path and a short crenellated defensive stone shield. Low polygon layout optimized for modular auto-tiling grid placement in Godot 4.3. StandardMaterial3D textures. Pivot point at the exact bottom center floor plane. A bronze eagle emblem on the front wall facade must map directly to the player team color slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular wall behavior. 1. Placement state: The heavy sillar block slams into the terrain grid with an intense stone rumble and dust puff VFX. 2. Gate interaction (if upgraded to WallGate3D): A heavy iron-reinforced wooden door splits and slides open smoothly when allied units approach, verifying the alliance matrix. 3. Collapse state: The masonry fractures and disintegrates into large stone chunks.

## MANUAL DE PROMPTS 3D: ERA MEDIEVAL (ERA 4)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Caballero Blindado Pesado (Caballero\_Pesado)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS game asset, low-poly heavy cavalry soldier, a medieval elite knight in full plate armor. Polished steel plate armor covering torso and limbs, great helm with breathing holes, pauldrons, and sabatons. Character is mounted on a muscular warhorse equipped with matching steel chainmail bards and a heavy fabric caparison. Holding a massive steel mandoble two-handed sword in the right hand. Clear A-pose for the rider, symmetric structure. Low-poly optimized. Origin pivot point exactly at the base of the horse hooves (0,0,0). Include a dedicated material channel on the horse caparison cloth for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D mounted knight combat animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Idle stance (horse restlessly shifting weight, knight holding sword upward over shoulder). 2. Move blend (horse trotting fluidly, transitioning into a full charging gallop at 6.5 m/s with lance point leveled). 3. Attack OneShot (swinging the massive mandoble sword in a lethal crushing downward cleave). 4. Hit reaction

(horse rearing slightly). All animations support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55m distance.

## 2. Piquero Medieval (Pikeman\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, medieval pikeman infantry soldier. Wearing an iron morrion helmet, an iron breastplate plate armor over a padded cloth gambeson, and iron tassets. Holding an exceptionally long 4.5-meter wooden pike shaft tipped with a sharp steel diamond arrowhead blade in his right hand. Symmetric standing A-pose mesh structure. Clean PBR textures. Origin pivot set flat at the ground plane center (0,0,0). The fabric sleeves of the gambeson must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D long pike infantry combat animation library. Loops required: 1. Hold Ground Idle (bracing the long pike firmly forward, knees bent in a locked phalanx stance). 2. March/Run (holding the massive pike perfectly upright while running forward at 4.2 m/s). 3. Attack OneShot (performing rapid, long-range stabbing thrusts forward). 4. Bracing anti-cavalry lock (slamming the pike butt into the ground, locking it to apply the x3.5 modifier against group 'vehicles\_3d' and horses). Blended smoothly via a 1D blendspace node.

## 3. Ballestero con Gola (Crossbowman\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS ranged unit, a medieval crossbowman sniper. Wearing a steel gola neck guard, light chainmail shirt, and an iron kettle hat helmet. Equipped with a heavy wooden and steel crossbow with a metal stirrup loop at the front in the left hand, and a leather bolt quiver attached to the back node 'BackAttachment'. Flat ground base geometry. Pivot point at the bottom center of the feet (0,0,0). The fabric tunic worn over the chainmail must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D crossbow combat functionality. Loops required: 1. Ranged Guard Idle (holding crossbow horizontally, cocked and loaded with a bolt, scanning terrain). 2. Move blend (running forward holding the weapon across the stomach). 3. Attack OneShot (releasing the trigger trigger snap, firing a high-velocity bolt, then executing a reload loop where the soldier places his foot in the stirrup and pulls the mechanical lever back to load the next bolt). Instances a Projectile3D object at the ProjectileMuzzle global position.

## 4. Monje Templario (Monk\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS mystic/theocratic character, a medieval monk templar. Wearing a loose, coarse brown wool habit robe with a distinct waist rope cord and a wooden rosary dangling from it. Face partially shaded by a large cloth cowl hood. Holding a small sacred wooden relic cross box in his

hands. Majestic standing pose. High-quality StandardMaterial3D textures. Pivot at the center base of the feet (0,0,0). A large heraldic cross emblem on the chest robe must map directly to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D monk/prophet animation controller set. Loops: 1. Faith generation Idle (kneeling or standing, head lowered, reciting passive faith incantations to generate +5/s points to GlobalResourceManager). 2. March/Run (calm walking stride). 3. Conversion loop (raising the relic cross forward toward an enemy soldier or tower, a golden aura channeling around him as the network authority conversion meter fills up). 4. Death sequence (collapsing flat onto the ground). Full animation LOD support.

---

## SECCIÓN 2: EDIFICACIONES Y MAQUINARIA DE ASIEDO PESADO

### 5. El Castillo Feudal / Centro Urbano (TownCenter\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, a medieval castle town center feudal capitol. A grand fortress compound built from rough grey stone masonry block walls, featuring a wide protective water moat foso, defensive matacanes hanging balconies, almenas battlements, and a massive central square keep tower del homenaje. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Large vertical heraldic pendon banners hanging from the main towers must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D structural state animations and visual nodes. 1. Construction Phase: Hide final model, display 'Historical\_Scaffold' (massive interlocking timber towers, crane wheels, pulleys, and ropes lifting stone blocks) scaling vertically via Tween from 0% to 100%. 2. Active State: Moat bridge lowers, entrance torches emit fire particles (VFX). 3. Damaged State: Stone walls fracture and crumble into rocky debris when health is below 50%.

### 6. Trabuquete de Contrapeso (Trabuquete\_Contrapeso)

- **Prompt de Diseño 3D (Modelado):**

3D monumental low-poly RTS siege artillery asset, a massive medieval Trebuchet trabuquete. Heavy timber frame constructed from thick oak beams, featuring a large pivot axle holding a long asymmetrical throwing arm. The short end of the arm holds a massive wooden box counterweight filled with heavy stone blocks, while the long end features a rope sling holding a giant boulder. StandardMaterial3D textures. Origin pivot point centered flat at the base frame on the floor (0,0,0). Structural side bracing planks must feature a team color crest banner mapped to the player bando.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D super-siege mechanical machine animation. 1. Active Idle (arm pulled down fully, counterweight raised high under tension, sling resting on the slider track). 2. Move cycle: Cannot move naturally, static structure placement. 3. Attack OneShot (the trigger releases, the massive counterweight box drops violently downward due to gravity, the throwing arm swings vertically upward in a massive arc, launching the boulder projectile in a high parabolic trajectory, generating rope whip dust VFX). 4. Reload loop (winches rotating slowly to crank the arm back down).

#### 7. Torre de Asedio Rodante (Torre\_Asedio\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly historical siege vehicle asset, a medieval rolling siege tower. A tall three-story vertical wooden tower structure covered on the front and sides with raw, damp animal skins and leather pelts to prevent fire. Rides on six heavy solid wooden wheels at the base. The top story features a heavy hinged wooden drop-ramp drawbridge pointing forward. Optimized low polygon mesh, clean PBR textures. Pivot point at the center base on the floor (0,0,0). Side cloth covers must feature team color markings mapped to the player bando channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D siege transport vehicle locomotion matrix. Loops required: 1. Idle (wheels static, structure creaking slightly). 2. Move cycle (six solid wooden wheels rotating slowly, generating deep dirt track dust particles behind the treads while moving forward at 2.5 m/s). 3. Attack/Deploy state: When reaching an enemy muralla wall, the top hinged wooden drawbridge ramp drops violently forward with a loud crash and screen-shake alert, allowing troops inside to exit.

#### 8. Ariete Protegido con Techo (Ariete\_Techo\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D stylized siege machinery structure, a medieval covered battering ram. A mobile wooden shed house structure with a steeply pitched inclined wooden roof covered with protective cured hides to repel arrow barrages. Inside the open-ended shed, a massive log beam with an iron ring head is suspended by heavy steel chains. Rides on four heavy wooden wheels. Low-poly optimized. Pivot at ground center (0,0,0). The roof hide borders must map to the player team color mask.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D protected ram mechanical functionality. 1. Active Idle (ram static inside the canopy shed). 2. Move cycle (four wheels rotating, heavy wooden shed rumbling forward). 3. Attack OneShot (the suspended log beam swings back and forth rhythmically on its chains, slamming forward out of the canopy with massive kinetic impact momentum against enemy gates, playing an iron-on-wood collision VFX).

---

### SECCIÓN 3: LOGÍSTICA NAVAL Y TRANSPORTES

#### 9. Carraca Galeón Medieval (Carraca\_Galeón\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS naval warship asset, a medieval Carraca galleon ship. High-sided, bulky wooden hull featuring tall, prominent castle structures at the proa bow and popa stern. Equipped with three tall masts rigging large billowing fabric sails with painted medieval cross heraldry. Optimized for deep water navigation at Y=-1.8m depth. Pivot point at the geometric bottom center on the water line. The massive square main sail canvas must map entirely to the player team color bando channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D naval transport and combat animation matrix. Loops required: 1. Floating Idle (swaying gracefully on water shader using soft wave sine calculations). 2. Sailing/Move cycle (sails billowing tight under wind, hull cutting through the water generating a prominent split white foam wake particle trail at the bow and stern while navigating at 6.5 m/s). 3. Cargo Garrison: Array handling logic to load up to 10 infantry units, expelling them safely on beaches upon `rpc_descargar_todo()`.

10. Carromato de Bueyes (Carromato\_Bueyes\_Era4)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly logistics vehicle asset, a medieval wooden wagon carromato. Composed of a deep open cargo cart bed made of sturdy grey stone and weathered wood planks, riding on four iron-rimmed spoked wheels. Connected via a central heavy timber pole yoke harness to two stylized slow, muscular black oxen bueyes. Optimized for transport logic. StandardMaterial3D textures. Pivot point centered at the base on the floor (0,0,0). Include a draped linen canopy covering the cargo bed mapped directly to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D transport vehicle logistics animation loop. Loops: 1. Idle (oxen chewing, tail swishing, cart static). 2. Move cycle (oxen executing a slow heavy plodding walking loop, wheels rotating steadily, generating light trail dust particles at 5.0 m/s). 3. Cargo/Garrison state: Serves as a troop transport wagon. Triggers `rpc_cargar_soldado()` hiding infantry meshes inside the array, and `rpc_descargar_todo()` to deploy them safely.

## SECCIÓN 4: FORTIFICACIONES Y PUENTES

11. La Muralla Almenada (Wall\_Medieval)

- **Prompt de Diseño 3D (Modelado):**

3D modular fortification asset, a medieval castle wall segment. High thick defensive wall built from heavy blocks of weathered grey stone masonry, featuring an elevated battlements almenas walkway path, a defensive camino de ronda corbel, and hanging wooden hoardings matacanes. Low polygon layout optimized for modular auto-tiling grid placement in Godot 4.3. StandardMaterial3D textures. Pivot point at the exact bottom center floor plane. A large heraldic heater shield hanging on the wall front must map directly to the player team color slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular castle wall behavior. 1. Placement state: The massive stone block structure slams down into the terrain layout with a loud stone impact explosion and dust puff VFX. 2. Gate interaction (WallGate3D): A heavy iron-reinforced double wooden portón splits and swings open on hinges to let allied units pass. 3. Destruction sequence: The masonry walls shatter and disintegrate into stony rubble blocks.

## 12. El Puente de Arco de Piedra (Bridge\_Medieval)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly modular terrain infrastructure bridge asset, a medieval stone arch bridge. A wide flat cobblestone roadway platform section supported over water by semi-circular stone masonry arch pillars. Designed with a perfectly flat upper collision surface at Y=0.1m height to allow character navigation agents and heavy carromatos or caballeros to cross the rivers cleanly. Clean low-poly topology. StandardMaterial3D textures. Origin pivot point centered at the bottom floor plane where it touches the riverbed. Guardrail hanging flags must map to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D infrastructure navigation functionality. 1. Spawn state: Placed by the RTSResourceSpawner over water nodes at Y=-1.8m depth, baking the navigation mesh asíncronamente via 'bake\_navigation\_mesh(false)' so CharacterBody3D agents can calculate pathfinding paths across it. 2. Active state: Completely static, allows infantry, caballeros, and wagons to cross water bodies without pathfinding lockups.

## MANUAL DE PROMPTS 3D: RENACIMIENTO (ERA 5)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Mosquetero de Pólvara (Mosquetero)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS game asset, low-poly ranged infantry soldier, a Renaissance gunpowder musketeer. Wearing a wide-brimmed felt hat with a single long feather, a thick protective leather buff doublet jupon over loose puffy shirt sleeves, and tall leather boots. Carrying a leather bandolier with wooden gunpowder bottles across his chest. Holding a heavy wooden and iron matchlock musket rifle in the left hand and a wooden aiming fork rest stake in the right hand. Clear A-pose, symmetric body structure. Low-poly optimized. Origin pivot point exactly at the base of the feet (0,0,0). Include a dedicated material channel on the large feather and doublet trimmings for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D humanoid infantry animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Ranged Idle (standing alert, holding musket resting on his shoulder, scanning terrain). 2. Move blend (marching forward holding the heavy rifle across the chest at 4.2 m/s). 3. Attack OneShot (planting the wooden aiming fork into the ground, resting the musket barrel on it, taking aim, and firing with a bright muzzle flash VFX and a puff of white smoke particles). 4. Reload loop (blowing on the match cord, pouring powder down the barrel from a bottle, using a ramrod). All animations support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55m distance.

## 2. Alabardero Suizo (Halberdier\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, Renaissance Swiss halberdier infantry soldier. Wearing a polished steel morion helmet, a steel breastplate with a distinct central ridge, and a colourful slashed double jacket (manga acuchillada) with puffed breeches. Holding a tall, elegant steel halberd weapon equipped with a large axe head, a top armor-piercing spike, and a curved rear hook. Symmetric standing A-pose mesh structure. Clean PBR textures. Origin pivot set flat at the ground plane center (0,0,0). The main colorful fabric stripes of the slashed trousers must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D heavy halberd infantry combat animation library. Loops required: 1. Combat Idle (holding the halberd upright in a wide, stable defensive guard stance). 2. March/Run (jogging forward holding the long halberd diagonally across the torso). 3. Attack OneShot (performing powerful horizontal axe cleaves, interspersed with direct overhead spike thrusts). 4. Anti-Cavalry brace (hooking weapons downward to pull down riders, triggering the x3.5 multiplier against group 'vehicles\_3d'). Blended smoothly via a 1D blendspace node.

## 3. Conquistador Ecuestre (Conquistador\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS cavalry unit, a Renaissance Spanish conquistador. Wearing a bright polished steel morion helmet, an iron steel breastplate plate armor over a linen shirt, and leather riding boots. Character is mounted on a agile, fast brown horse equipped with basic leather stirrups and bridle. Holding an early flintlock wheel-lock cavalry pistol in the right hand and leather reins in the left. Flat ground base geometry. Pivot point at the bottom center of the horse hooves (0,0,0). The horse saddle blanket fabric must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D mounted firearm combat functionality. Loops required: 1. Mounted Idle (horse shifting weight, rider holding the pistol upright). 2. Move blend (horse executing a swift trotting loop, transitioning into a fast combat gallop at 6.5 m/s). 3. Attack OneShot (leveling the wheel-lock pistol forward, firing a high-velocity projectile bullet with a smoke cloud VFX, then holstering it to pull a short sword for melee fallback). Instances a Projectile3D object at the ProjectileMuzzle position.

#### 4. Artillero de Cañón (Cannonier\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS secondary infantry character, a Renaissance artillero cannon operator. Wearing an iron skull cap, a simple canvas vest, and loose breeches. Holding a long wooden botafuegos linstock rod with a glowing, smoldering slow match cord wrapped at the tip in his right hand. Left hand carries a leather pouch for powder charges. Grounded standing pose. High-quality StandardMaterial3D textures. Pivot at the center base of the feet (0,0,0). A large fabric waist sash must map directly to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D cannon crew animation controller set. Loops: 1. Active Idle (standing ready next to an artillery piece, blowing on the slow match to keep it lit). 2. March/Run (jogging forward with the linstock rod). 3. Fire Command OneShot (stepping forward, lowering the lit match cord onto a cannon touchhole to trigger the firing sequence). 4. Swabbing/Reload animation (pushing a cleaning sponge down an invisible cannon barrel). Full animation LOD support.

---

## SECCIÓN 2: EDIFICACIONES Y ARTILLERÍA DE RENACIMIENTO

#### 5. El Palacio Simétrico / Centro Urbano (TownCenter\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, a Renaissance palace town center Italian capitol. A grand elegant compound built with perfectly symmetrical brick and plaster facades, featuring a grand central terracotta dome cúpula, arcade loggias with marble arches, and a paved brick courtyard. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Large silk heraldic banners hanging down from the balcony railings must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D structural state animations and visual nodes. 1. Construction Phase: Hide final model, display 'Historical\_Scaffold' (massive intricate timber towers, hoist winches, gear wheels, and ropes lifting marble blocks and dome supports) scaling vertically via Tween from 0% to 100%. 2. Active State: Courtyard gates open, grand braziers emit soft smoke particles (VFX). 3. Damaged State: Brick walls crack open and the plaster crumbles into dust when health is below 50%.

#### 6. Cañón Culebrina (Cañón\_Culebrina\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly historical artillery machine asset, a Renaissance Culverin cañón. A long, slender cast bronze barrel with elegant decorative rings, mounted onto a sturdy oak wood wheeled carriage cureña painted in weather-resistant lacquer. Two large iron-shod wooden wheels at the sides. Must feature a specific child node socket called ProjectileMuzzle located at the absolute front tip of the bronze barrel opening. Low polygon mesh, clean PBR textures. Pivot point at the center

base on the floor (0,0,0). The wooden carriage sides must feature clean stripes for team color texture overlay.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D artillery machine combat and locomotion matrix. Loops required: 1. Idle (barrel cold, static wheels). 2. Move cycle (two heavy wooden wheels rotating steadily, generating light dirt dust particles behind the tracks while moving forward at 3.0 m/s). 3. Attack OneShot (the cannon fires a massive iron ball projectile in a direct flat trajectory, generating an intense muzzle flash flare, a massive push-back recoil animation where the carriage rolls backward 1 meter, and a thick cloud of white gunpowder smoke particles).

7. Mortero de Sitio (Mortero\_Sitio\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS artillery asset, a Renaissance siege mortar. A short, extremely thick wide-bore cast bronze barrel pointing upward at a steep 45-degree angle, locked onto a heavy, massive squat block base made of iron-reinforced solid oak timber resting flat on the ground. Holds a massive explosive spherical bomb projectile inside the barrel. StandardMaterial3D textures. Pivot point at the absolute floor plane center (0,0,0). The timber base corner plates must feature a team color banner mapped to the player bando.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D high-angle siege artillery animation. 1. Active Idle: Mortar loaded, static block base. 2. Move cycle: Cannot move naturally, requires being towed or static placement. 3. Attack OneShot (barrel shoots the massive iron bomb into a high parabolic trajectory, generating an immense blast shockwave VFX, intense orange flames, and a dense billowing smoke cloud, shaking the camera screen via network triggers).

8. Carro Blindado de Da Vinci (Carro\_Blindado\_DaVinci)

- **Prompt de Diseño 3D (Modelado):**

3D stylized early armored vehicle machinery structure, a Leonardo da Vinci turtle-shell tank. A wide conical aerodynamic canopy structure made entirely of interlocking wooden planks reinforced with metal rings, completely enclosing the interior. Multiple small bronze cannon muzzles protrude symmetrically in a 360-degree perimeter around the base rim. Rides on four hidden internal wheels. Low-poly optimized. Pivot at ground center (0,0,0). The top wooden cone cap must feature a canvas ring banner mapped to the player team color mask.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D early armored vehicle locomotion and combat matrix. Loops: 1. Idle (canopy shaking slightly from internal crew movement). 2. Move cycle (the entire conical wooden structure rumbles forward smoothly at 3.5 m/s, generating a continuous dust stream behind its path). 3. Attack OneShot (cannons fire sequentially or simultaneously in a 360-degree volley, producing multiple circular muzzle flashes and white smoke puffs from the perimeter). Registered under group 'vehicles\_3d'.

---

## SECCIÓN 3: LOGÍSTICA NAVAL Y EXPLORACIÓN

### 9. Galeón de Pólvora (Galeón\_Pólvora\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS naval battleship asset, a Renaissance gunpowder Galleon galeón. High-sided, massive wooden military hull featuring two stacked decks (puentes) of open square gunports with bronze cannon muzzles pointing out from the flanks. Equipped with three tall masts rigging large billowing fabric sails with painted royal heraldry crests. Optimized for water navigation at Y=-1.8m depth. Pivot point at the geometric bottom center on the water line. The main square sails must map entirely to the player team color bando channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D naval broadside combat and navigation animation matrix. Loops required: 1. Floating Idle (swaying gently on water shader using wave sine calculations). 2. Sailing/Move cycle (sails billowing tight under wind, hull cutting through the water generating a prominent split white foam wake particle trail at the bow and stern while navigating at 6.0 m/s). 3. Attack Broadside OneShot (all side gunports fire simultaneously in a massive coordinated cannon volley, creating a row of bright muzzle flashes, a thick wall of white gunpowder smoke, and pushing the ship hull sideways in the water from the intense kinetic recoil).

### 10. Carabela Exploradora (Carabela\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly exploration naval vessel asset, a Renaissance Caravel carabela ship. Sleek, fast lightweight wooden hull layout with a shallow draft and high lateen sails rigged on three angled masts. Designed with clean topology optimized for rapid scouting navigation visibility. StandardMaterial3D textures. Pivot point centered at the water line base (0,0,0). The main lateen triangular sails must feature a large red cross or insignia mapped directly to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D fast naval vessel scouting animation loop. Loops: 1. Floating Idle (light swaying on water surface). 2. Sailing/Move cycle (navigating extremely fast at 7.8 m/s with a long, slender white foam wake trail, sails adjusting dynamically to wind direction). 3. Reveal Radar scan: Integrates with the FogOfWarManager to scan a wide 40m sight radius across coastal boundaries, updating local player fog matrices in real-time.

---

## SECCIÓN 4: CIUDADELAS EN ESTRELLA

### 11. El Bastión de Traza Italiana (Tower\_Bastion\_Era5)

- **Prompt de Diseño 3D (Modelado):**

3D modular defensive building asset, a Renaissance star fortress bastion tower. A low-profile, wide wedge-shaped arrowhead bastion made of thick sloped brick and earthworks masonry designed to deflect cannonballs. The flat top deck features an emplaced heavy bronze Culverin cannon on a rotating pivot chassis. Must feature a specific child node socket called ProjectileMuzzle located at the cannon tip. Low polygon layout optimized for modular grid connection. StandardMaterial3D textures. Pivot point at the bottom center floor plane. Banners on the brick walls must map to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D bastion combat functionality. 1. Active Idle: Cannon operator standing ready, scanning the arena. 2. Attack state: The emplaced cannon rotates toward target, executing an artillery logic, instancing a heavy cannonball Projectile3D object at the ProjectileMuzzle position with a large muzzle flash flare and smoke. 3. Destruction sequence: The brick facade collapses into a sloped pile of loose dirt and rubble.

## MANUAL DE PROMPTS 3D: ERA INDUSTRIAL (ERA 6)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Fusilero Imperial (Fusilero\_Imperial)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS game asset, low-poly military infantry soldier, an Industrial Age imperial fusilier. Wearing a bright red or blue military tunic casack coat with white cross-belts, dark trousers, a tall leather shako hat with a brass plate insignia, and black leather pouches. Holding a long iron bolt-action rifle fitted with a fixed triangular steel bayonet in the right hand. Clear A-pose, symmetric body structure. Low-poly optimized. Origin pivot point exactly at the base of the feet (0,0,0). Include a dedicated material channel on the primary tunic coat for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D humanoid soldier animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Idle stance (disciplined attention guard stance, rifle held upright next to shoulder). 2. March/Run cycle (steady synchronized rank jog holding the rifle across the torso at 4.2 m/s). 3. Attack Ranged OneShot (kneeling or standing, raising rifle to eyes, taking aim, and firing with a sharp muzzle flash spark and small gray smoke puff). 4. Attack Melee OneShot (performing a powerful forward lunge thrust strike with the fixed bayonet blade). All animations support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55m distance.

#### 2. Oficial de Línea Comandante (Line\_Officer)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS commander character, an Industrial Age line officer. Wearing an ornate officer uniform coat with gold epaulets, white breeches, a leather officer sash, and a bicorn hat with metallic trimmings. Carrying a sheathed ceremonial saber on the hip and holding an early flintlock officer pistol in the right hand. Grounded standing pose. High-quality StandardMaterial3D textures. Pivot at the center base of the feet (0,0,0). The prominent fabric officer sash and uniform cuffs must map directly to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D officer tactical animation controller set. Loops: 1. Inspiration Aura Idle (raising pistol or sword high in the air, pointing forward, generating the passive +15% movement and attack speed aura in a 10m Area3D for group 'player\_units'). 2. March/Run (commanding forward advance stride). 3. Panic/Death sequence (when killed, triggers the síncrona RPC 'aplicar\_penalizacion\_moral' applying a -20% damage modifier penalty to all nearby units in a 10m radius for 5.0 seconds due to tactical loss, falling flat onto the ground). Full animation LOD support.

### 3. Húsar a Caballo (Hussar\_Era6)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS cavalry unit, an Industrial Age light húsar hussar rider. Wearing a detailed hussar jacket with gold braiding cord lines, a draped pelisse fur jacket over the left shoulder, tight trousers, and a busby fur hat. Character is mounted on a sleek, fast black warhorse. Holding a sharp curved steel cavalry saber in the right hand and leather reins in the left. Flat ground base geometry. Pivot point at the bottom center of the horse hooves (0,0,0). The draped shoulder pelisse fabric must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D light cavalry saber combat functionality. Loops required: 1. Mounted Idle (horse restlessly stamping its hooves, rider swinging saber casually). 2. Move blend (horse executing an extremely rapid, graceful galloping loop at 6.8 m/s). 3. Attack OneShot (leaning forward from the saddle, performing low-angle rapid slashes with the curved saber to trample and cut down infantry units). Smooth transitions via a 1D blendspace node.

## SECCIÓN 2: EDIFICACIONES E INFRAESTRUCTURA INDUSTRIAL

### 4. El Ayuntamiento Victoriano / Centro Urbano (TownCenter\_Era6)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, an Industrial Age municipal ayuntamiento town center capitol. A grand Victorian architecture town hall built out of dark red brick masonry blocks, featuring an imposing high central clock tower monument with a bronze roof dome, large vertical arched windows, and functional iron chimneys emitting smoke. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Large fabric flags flying from the clock tower roof poles must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D industrial structure state animations. 1. Construction Phase: Hide final model, display 'Industrial\_Scaffold' (massive frameworks of grey steel girders, steam cranes, lifting winches, and cables lifting bricks) scaling vertically via Tween from 0% to 100%. 2. Active State: Clock hands rotate slowly, roof chimneys emit a steady gray smoke particle stream (VFX). 3. Damaged State: Brick walls crack open and shatter, emitting iron dust and debris when health is below 50%.

#### 5. La Factoría Pesada (Factory\_Era6)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly production building asset, an Industrial Age factory pesada workshop. A massive manufacturing complex built out of dark iron columns, riveted steel plates, corrugated zinc metal sheets, and featuring multiple tall cylindrical brick chimneys. Includes a large open hangar bay doorway at the front for unit deployment. Low polycount optimized for mobile crossplay. Clean StandardMaterial3D materials. Pivot point located at the absolute floor plane center (0,0,0). The front hangar bay awning canvas must map directly to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D industrial production animation logic. 1. Active Assembly state: The interior workshop fires pulse with hot bright light, emitting heat distortion shaders and heavy thick black soot particles from all tall chimneys. 2. Unit Production trigger: When a tank or vehicle unit is queued for manufacturing, automated internal gear assemblies rotate visible on the roof facade, playing steam-release and mechanical clanking SFX.

---

### 🔪 SECCIÓN 3: VEHÍCULOS, ARTILLERÍA Y ACORAZADOS DE VAPOR

#### 6. Ametralladora Gatling (Ametralladora\_Gatling)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly historical artillery weapon asset, an Industrial Age Gatling gun. Composed of a bundle of ten rotating long iron barrels arranged in a cylinder, mounted onto a sturdy iron tripod frame or a light two-wheeled carriage chassis with an ammunition hopper feed box on top. Must feature a specific child node socket called ProjectileMuzzle located at the forward tip of the barrel bundle array. Low polygon mesh, clean PBR metal textures. Pivot point at the center base on the floor (0,0,0). The rear iron shield plate must feature a crest mapped to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D Gatling machine gun mechanical combat and locomotion matrix. Loops required: 1. Idle (barrels static). 2. Move cycle (two side wheels rotating smoothly, generating light dust particles behind the tracks while moving at 3.5 m/s). 3. Attack loop (the hand crank on the side rotates furiously, the barrel bundle spins rapidly in a circular loop, firing a continuous high-cadence stream

of bullet projectiles with a repeating bright muzzle flare spark and a constant stream of spent brass casing particles ejected downward).

#### 7. Tanque de Vapor calderas de Hierro (SteamTank\_Era6)

- **Prompt de Diseño 3D (Modelado):**

3D stylized early armored vehicle machinery structure, an Industrial Age steam tank. A heavy, bulky box-shaped combat hull made out of heavy cast-iron plates with prominent large rivets, featuring a tall brass boiler chimney stack at the rear emitting steam, and a heavy steam cannon muzzle protruding forward from a ball mount. Rides on heavy tracked steel caterpillar rollers. Low-poly optimized. Pivot at ground center (0,0,0). Side marking plates must feature an eagle insignia banner mapped to the player team color mask.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D steam vehicle locomotion and combat matrix. Loops: 1. Active Idle (chassis vibrating heavily from boiler pressure, rear chimney stack emitting a constant vertical puff of white steam particles). 2. Move cycle (the steel tracks rotate heavily, the entire iron hull rumbles forward at 4.0 m/s, generating deep dirt tracks dust particles). 3. Attack OneShot (the front steam cannon fires with a loud pressure pop, shooting a projectile ball accompanied by a massive expanding cloud of white steam and sparks). Registered under group 'vehicles\_3d'.

#### 8. Camión de Transporte Industrial (Camion\_Industrial)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly logistics vehicle asset, an Industrial Age troop transport truck camión. A primitive military truck carriage hull made of dark green riveted steel plates, featuring an open front engine cabin with two large lanterns, four solid rubber wheels, and an open flatbed cargo area covered by a canvas lona hood canopy at the rear. Optimized for transport logic. StandardMaterial3D textures. Pivot point centered at the base on the floor (0,0,0). The canvas lona canopy covering the cargo bed must map directly to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D logistics vehicle transport loop. Loops: 1. Idle (motor sputtering, chassis shaking slightly). 2. Move cycle (wheels rotating rapidly, front engine grill emitting tiny heat lines, generating a steady trail dust particle VFX behind the path while traveling at 7.5 m/s). 3. Cargo/Garrison state: Serves as a troop transport wagon. Handles `rpc_cargar_soldado()` hiding up to 8 infantry meshes inside its array, and drops them safely upon `rpc_descargar_todo()` triggers.

#### 9. Buque Acorazado Ironclad (Acorazado\_Ironclad)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS naval battleship asset, an Industrial Age Ironclad acorazado steamship. A heavy, low-profile military hull constructed from thick sheets of remachado iron plates, featuring fully enclosed sloped gun decks with heavy cannon muzzles pointing out. Prominent central vertical black steel chimney stack emitting heavy smoke. Optimized for water navigation at Y=-1.8m depth.

Pivot point at the geometric bottom center on the water line. A massive fabric flag at the stern mast must map entirely to the player team color bando channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D naval combat and navigation animation matrix. Loops required: 1. Floating Idle (heavy slow swaying on water shader). 2. Sailing/Move cycle (central chimney stack puffing a dense continuous stream of black soot particles, hull cutting through the water generating a massive split white foam wake particle trail at the bow while navigating at 8.0 m/s). 3. Attack OneShot (side gun decks fire a synchronized heavy cannon broadside, creating muzzle flashes and smoke).

---

## SECCIÓN 4: FORTIFICACIONES Y VIADUCTOS

### 10. La Muralla de Hormigón y Espinas (Wall\_Industrial\_Mesh)

- **Prompt de Diseño 3D (Modelado):**

3D modular fortification asset, an Industrial Age defensive wall segment. High sturdy wall barrier constructed out of thick blocks of weathered grey concrete masonry, reinforced with horizontal iron bars and topped with dense rows of sharp alambre de espino barbed wire coils. Low polygon layout optimized for modular auto-tiling grid placement in Godot 4.3. StandardMaterial3D textures. Pivot point at the exact bottom center floor plane. A painted stenciled military emblem on the front wall facade must map directly to the player team color slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular industrial wall behavior. 1. Placement state: The concrete block structure slams down into the terrain layout with an intense heavy slam and dust puff VFX. 2. Gate interaction (WallGate3D): A heavy automated iron compuerta split-door slides sideways into the wall frame to let allied units or trucks pass. 3. Destruction sequence: The concrete structures fracture and collapse into a pile of jagged stone and rebar debris.

### 11. Viaducto de Vigas de Hierro (Bridge\_Industrial)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly modular terrain infrastructure bridge asset, an Industrial Age iron viaduct bridge. A wide flat steel roadway platform section supported over water by crisscrossing open-lattice structures of dark grey riveted iron girders and trusses. Designed with a perfectly flat upper collision surface at Y=0.1m height to allow character navigation agents, heavy steam tanks, and camión transport trucks to cross the rivers cleanly. Clean low-poly topology. StandardMaterial3D textures. Origin pivot point centered at the bottom floor plane where it touches the riverbed. Support trusses must use a sub-material slot for player team color assignment.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D infrastructure navigation functionality. 1. Spawn state: Placed by the RTSResourceSpawner over water nodes at Y=-1.8m depth, baking the navigation mesh asíncronamente via 'bake\_navigation\_mesh(false)' so CharacterBody3D and vehicle agents can calculate pathfinding

paths across it. 2. Active state: Completely static, allows heavy armor, infantry, and logistics to cross water bodies smoothly without pathfinding lockups.

## MANUAL DE PROMPTS 3D: ERA ATÓMICA (ERA 7)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Lanzallamas de Trinchera (Lanzallamas\_Napalm)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS game asset, low-poly specialized infantry soldier, an Atomic Age trench flamethrower trooper. Wearing a bulky canvas military hazard jacket, thick rubber gloves, and a full-face metallic protective gas mask with rounded glass goggles. Carrying two connected cylinders of pressurized fuel tanks attached to the back node 'BackAttachment'. Holding a long iron nozzle flame gun projector in his hands, connected to the back tanks via a black rubber flexible hose pipe. Clear A-pose, symmetric mesh. PBR textures, clean StandardMaterial3D. Pivot point strictly at the soles of the feet (0,0,0). Include an untextured color mask section on the helmet shoulder straps for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D humanoid soldier animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Idle stance (standing slightly hunched, scanning terrain, holding nozzle gun forward). 2. March/Run cycle (steady weight-bearing jog holding the heavy gear at 4.2 m/s). 3. Attack Area3D OneShot (stepping forward, sweeping the nozzle in a 4.0m conical arc while shooting a continuous stream of bright red and orange emissive fire particles, triggering the RPC 'aplicar\_quemadura' on soldiers and buildings inside the cone for 3.0 seconds). All animations support linear interpolation blending (lerp) and Animation LOD switching to 15 FPS at 55m distance.

#### 2. Soldado RPG Anti-Tanque (Lanzacohetes\_Bazuca)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS army unit, an Atomic Age anti-tank rocket soldier. Wearing an olive-drab fatigue uniform, a heavy canvas flak jacket vest, and an M1 steel helmet. Carrying an iron rocket-propelled grenade (RPG) cylindrical tube rocket launcher over his right shoulder. Left hand rests on a spare ammunition pouch bag attached to his belt. Symmetric standing A-pose mesh structure. Clean PBR textures. Origin pivot set flat at the ground plane center (0,0,0). The main helmet surface and shoulder squad patch must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D anti-tank infantry combat animation library. Loops required: 1. Combat Idle (kneeling or standing in a low profile stance, right shoulder raised balancing the launcher tube, searching for targets). 2. March/Run (jogging forward holding the tube upright across the shoulder). 3. Attack

OneShot (leveling the launcher forward, firing a high-velocity finned rocket projectile with a back-blast dust puff and an intense white smoke trail, applying a strict x3.5 damage multiplier if hitting group 'vehicles\_3d').

### 3. Soldado de Asalto Táctico (GISoldier\_Era7)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, Atomic Age standard GI assault soldier. Athletic build, wearing an olive-drab modern fatigue jacket, tactical combat boots, and an M1 steel helmet covered with a netting texture. Equipped with an automatic assault rifle weapon in the hands and utility pouches on the belt waist. Flat ground base geometry. Pivot point at the bottom center of the feet (0,0,0). The fabric sleeve undershirt must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D infantry rifle combat functionality. Loops required: 1. Rifle Guard Idle (standing alert, rifle held ready across the chest). 2. Move blend (running forward while leaning low to avoid gunfire). 3. Attack OneShot (raising rifle to the cheek, executing rapid three-round burst fire shots with tiny muzzle flash sparks). Synchronized via network parameters for instant bullet instantiation.

### 4. General de División (GeneralOfficer\_Era7)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS hero character, an Atomic Age General officer. Wearing a double-breasted long olive green military gabardine overcoat coat with stars on the shoulders, a formal visor service cap hat, and holding heavy optical binoculars in his hands. Stern standing stance. High-quality StandardMaterial3D textures. Pivot at the center base of the feet (0,0,0). The formal uniform tie and cap piping must map directly to the dynamic player color bando selection.

- **Prompt de Movimiento (Animación / Rigging):**

3D general hero animation controller set. Loops: 1. Commanding Idle (standing still, looking through binoculars, hand waving forward to direct troops). 2. March/Run (dignified walking stride). 3. Strategic Map Call OneShot (raising a radio handset to his mouth, gesturing toward the horizon to trigger morale buffs for group 'player\_units'). Full animation LOD support.

---

## SECCIÓN 2: EDIFICACIONES Y SILOS DE DESTRUCCIÓN MASIVA

### 5. Edificio Gubernamental / Centro Urbano (TownCenter\_Era7)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, an Atomic Age governmental town center capitol. A grand brutalist/Bauhaus architecture municipal complex built from modular reinforced concrete slabs, featuring multiple tall vertical glass slit windows, central entryway steps, and a prominent steel communications grid tower structure with multiple spinning radar dishes and radio antennae on

the roof. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). A large fabric flag on the central roof pole must use the player team color material slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modern structure state animations. 1. Construction Phase: Hide final model, display 'Industrial\_Scaffold' (dense scaffolding structures of grey steel scaffolding tubes, motorized tower cranes, cables, and brick pallets) scaling vertically via Tween from 0% to 100%. 2. Active State: Roof radar dishes rotate steadily, radio beacon tips flash with red emissive light. 3. Damaged State: Concrete facade breaks, cracks open, emitting rebar debris when health is below 50%.

#### 6. Silo Subterráneo ICBM (NukeSilo\_Era7)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly building asset, an Atomic Age underground nuclear missile silo. Composed of a flat circular blast-hardened concrete pad flush with the ground, featuring two heavy steel split hangar blast doors. When open, a massive vertical ballistic missile node (Misil\_Nuclear\_ICBM) with painted hazard checkers is visible emerging from the underground launch tube pit. Low polycount. Pivot point located at the absolute floor plane center (0,0,0). The missile nose cone fins must map directly to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D weapon launch animation logic. 1. Active Idle: Steel blast doors tightly locked, status lights green. 2. Launch Trigger Command: The two heavy steel split blast doors slide open sideways on hinges, the massive vertical ICBM missile rises up slightly out of the pit, then fires its main engine rockets, launching vertically into the sky with an immense blast wave VFX, intense orange flames, and a dense billowing smoke cloud that triggers a map-wide alarm.

#### 7. Casamata El Búnker Fortificado (Bunker\_Era7)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly defensive building structure, an Atomic Age fortified concrete bunker casamata. Low-profile rectangular bunker layout molded out of thick sheets of grey reinforced concrete with bullet impact marks, featuring a wide horizontal embrasure slit opening displaying a machine gun barrel. Surrounded at the base by rows of low-poly sandbag props and barbed wire. Low poly count optimized for mobile crossplay. Pivot at the bottom floor base (0,0,0). Include a painted division badge decal on the concrete facade mapped to the player team color channel.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D bunker combat behavior. 1. Active Idle: Machine gun barrel static inside the embrasure slot. 2. Attack state: When enemy infantry or armor enters its defensive radius, the machine gun barrel executes a rapid horizontal panning animation, firing a continuous high-speed stream of bullet projectiles with a repeating bright muzzle flare spark and grey smoke puffs.

## 8. Tanque Pesado de Asalto (Tanque\_Pesado\_Asalto)

- **Prompt de Diseño 3D (Modelado):**

3D stylized armored vehicle machinery structure, an Atomic Age heavy assault tank. Massive green armored steel hull with prominent riveted plates, heavy caterpillar tracks on side rollers, and a fully rotating rounded cast-iron central turret housing a long 90mm physical cannon barrel. Must feature a specific child node socket called ProjectileMuzzle located at the absolute front tip of the cannon opening. Low-poly optimized. Pivot at absolute ground center (0,0,0). Turret star markings must feature a design banner mapped to the player team color mask.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D heavy armor vehicle locomotion and combat matrix. Loops: 1. Active Idle (hull shaking slightly, engine grill emitting exhaust heat distortion lines). 2. Move cycle (the heavy caterpillar tracks rotate rapidly, the entire tank rumbles forward at 5.0 m/s, generating a continuous dust stream behind its path). 3. Attack OneShot (the turret cannon fires with an explosive flash flare, a 1-meter backward hull recoil animation, and a massive expanding cloud of white gunpowder smoke, creating a 5.0m radius Area3D shell impact explosion). Registered under group 'vehicles\_3d'.

## 9. Transporte Blindado APC (APC\_Transporte\_Era7)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly logistics vehicle asset, an Atomic Age armored personnel carrier APC. A boxy military transport vehicle hull made of thick green steel armor plates with prominent rivets, riding on heavy caterpillar track rollers. Features a small rotating top turret with a light automatic machine gun muzzle pointing forward. Optimized for transport logic. StandardMaterial3D textures. Pivot point centered at the tread base on the floor (0,0,0). Side identification panels must map directly to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D logistics vehicle transport loop. Loops: 1. Idle (motor humming, chassis static). 2. Move cycle (tracks rotating rapidly, generating a steady trail dust particle VFX behind the path while traveling at 8.0 m/s). 3. Cargo/Garrison state: Handles rpc\_cargar\_soldado() hiding up to 10 infantry meshes inside its array, and drops them safely upon rpc\_descargar\_todo() triggers. If destroyed, forces immediate emergency ejection of all surviving troops before deleting vehicle node.

## SECCIÓN 4: FORTIFICACIONES DE CONCRETO

## 10. La Muralla de Hormigón y Concertinas (Wall\_Industrial\_Mesh)

- **Prompt de Diseño 3D (Modelado):**

3D modular fortification asset, an Atomic Age defensive wall segment. High sturdy wall barrier constructed out of thick blocks of weathered grey concrete masonry, reinforced with horizontal iron rebar grids and topped with dense rows of sharp razor concertina wire coils. Low polygon layout optimized for modular auto-tiling grid placement in Godot 4.3. StandardMaterial3D

textures. Pivot point at the exact bottom center floor plane. A painted stenciled military emblem on the front wall facade must map directly to the player team color slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular modern wall behavior. 1. Placement state: The concrete block structure slams down into the terrain layout with an intense heavy slam and dust puff VFX. 2. Gate interaction (WallGate3D): A heavy automated iron compuerta split-door slides sideways into the wall frame to let allied units or trucks pass. 3. Destruction sequence: The concrete structures fracture and collapse into a pile of jagged stone and rebar debris.

---

## MANUAL DE PROMPTS 3D: ERA DIGITAL (ERA 8)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Infiltrador Óptico Camuflado (Infiltrador\_Nano)

- **Prompt de Diseño 3D (Modelado):**

3D stylized character, low-poly game-ready special ops unit for RTS, a Digital Age optical cloak infiltrador sniper. Wearing an advanced tight-fitting lightweight stealth suit made of matte black carbon fiber composites, featuring sharp contour lines and a sleek helmet mask with a glowing cyan horizontal LED visor line. Holding a long high-tech futuristic sniper rifle weapon. Clear A-pose stance, symmetric mesh. PBR textures, clean StandardMaterial3D. Pivot point strictly at the soles of the feet (0,0,0). Include an untextured color mask section on the shoulder plates for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D character animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Stealth Idle (low crouching posture, scanning environment while the script toggles the node's visibility to false for enemies). 2. Walk/Run cycle (silent tactical footsteps at 4.5 m/s). 3. Attack Opening OneShot (aiming rifle, releasing a silent laser flash that applies a strict x2.5 critical damage modifier from cloaking state, immediately breaking visibility to true). 4. Rearm Cloak transition (standing completely still for 4.0 seconds without combat to re-trigger stealth properties). All animations support linear interpolation blending (lerp) and Animation LOD switching.

#### 2. Especialista en Pulso EMP (Soldado\_EMP)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS infantry unit, a Digital Age electromagnetic pulse specialist soldier. Wearing a specialized electronic combat suit with heavy insulating rubberized pads and an advanced technical helmet with dual scanning optics lenses. Carrying a massive, high-tech shoulder-mounted EMP pulse wave generator cannon device connected to a glowing battery cell backpack attached to the back node 'BackAttachment'. Stable standing guard stance. Low-poly optimized.

Pivot at the bottom center of the feet (0,0,0). The glowing energy tubes on the backpack must use an emissive mask channel mapped to the player team color.

- **Prompt de Movimiento (Animación / Rigging):**

3D technical infantry combat animation library. Loops required: 1. Combat Idle (balancing the heavy EMP generator tube on the shoulder, weapon charging with soft electric particles). 2. Move blend (jogging forward carrying the technical equipment). 3. Attack Area3D OneShot (bracing stance, firing a dome-shaped electromagnetic blue shockwave projectile that deals zero damage to humans but applies a strict 4.0-second 'is\_stunned = true' short-circuit state via RPC to group 'drones' and 'cyber\_robotic'). Synchronized over network.

3. Cyborg de Combate Pesado (Cyborg\_Militar)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS heavy army unit, Digital Age military combat cyborg. A heavily augmented cybernetic humanoid combining organic chest scars with a pristine silver titanium skeleton chassis torso, cybernetic mechanical legs, and an glowing red optic scanner eye lens. The entire right arm is a massive embedded multi-barrel automated minigun weapon system. Symmetric standing A-pose mesh structure. Clean PBR textures with metallic reflections. Origin pivot set flat at the ground plane center (0,0,0). Left shoulder plates and leg armor decals must use the unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D heavy cybernetic animation matrix. Loops required: 1. Heavy Guard Idle (mechanical chassis vibrating slightly with hydraulic hums, minigun arm barrels spinning slowly). 2. March/Run (heavy mechanical heavy stomping gait at 4.2 m/s). 3. Attack loop (the minigun arm spins rapidly in a blur, firing a continuous high-velocity stream of kinetic bullet projectiles with a repeating bright muzzle flare spark and ejected brass shell particles). Blended smoothly using a 1D blendspace node.

---

## SECCIÓN 2: EDIFICACIONES Y RADARES ORBITALES

4. Rascacielos Corporativo / Centro Urbano (TownCenter\_Era8)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, a Digital Age corporate town center capitol skyscraper. A hyper-modern skyscraper tower structure constructed with a pristine blue-reflective glass curtain wall facade, sleek white composite metal frames, an open ground-level atrium lobby, and a prominent circular helicopter helipuerto pad on the roof deck topped with server ventilation nodes. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Digital glowing company logo decals on the top roof edges must use the player team color material slot with emissive properties.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D high-tech structure state animations. 1. Construction Phase: Hide final model, display 'Futuristic\_Scaffold' (a grid of laser emitter pillars projecting a semi-transparent blue wireframe holographic hologram grid of the skyscraper layout) scaling vertically via Tween from 0% to 100%. 2. Active State: Helipad indicator lights flash with blue and white emissive signals, roof cooling fans spin. 3. Damaged State: Glass panes shatter and explode outward, emitting digital matrix glitch particles when health is below 50%.

#### 5. Satélite de Enlace Cuántico (Satellite3D)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly radar tactical building asset, a Digital Age quantum communication satellite tracking station. Composed of a massive, white geodésico dome radar structures mounted on an elevated metallic framework platform. Features a large, fully rotating motorized satellite dish pointing upward toward the sky, lined with cian neon light strips. Low polycount optimized for mobile crossplay. Clean StandardMaterial3D materials. Pivot point located at the absolute ground floor center (0,0,0). The secondary data tracking array towers must map directly to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D orbital satellite animation logic. 1. Active Idle: Central satellite dish executes slow scanning panning and tilting animations tracking space vectors. 2. Radar Scan Ability Trigger: When the Host fires the active radar ability, the dish locks direction, emits an intense pulse of cian ring particles into the sky, invoking an RPC to pierce the FogOfWarManager and grant a 30m circle of full vision (STATE\_VISIBLE = 255) for 15.0 seconds anywhere on the procedural map, before entering a 120s cooldown.

---

### SECCIÓN 3: AVIACIÓN AVANZADA Y DRONES ENJAMBRE

#### 6. Dron Táctico Enjambre (Dron\_Enjambre\_Era8)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly robotic aerial miniature vehicle asset, a Digital Age light swarm drone quadcopter. Sleek aerodynamic matte-black polymer casing chassis body with four carbon-fiber micro-rotor blades spinning on low-profile arms. Features a tiny under-mounted dual micro-laser gun barrel pointing forward. Extremely low polygon count designed for large group replication in RTS. Clean StandardMaterial3D textures. Origin pivot point located at the absolute geometric center of the drone chassis. Core glowing LED strip indicators on the wings must use an emissive mask channel mapped to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D miniature robotic vehicle aerial locomotion and combat matrix. Loops required: 1. Floating Idle (hovering in place, swaying slightly up and down on a vector sine-wave to simulate automated altitude adjustments). 2. Sailing/Move cycle (tilting forward dynamically, rotors turning into a fast visual blur while flying at 9.0 m/s, ignoring terrain collisions). 3. Attack loop (firing rapid laser

beams from its nozzle with tiny cyan muzzle sparks). Automatically added to group 'drones' and 'flying'.

#### 7. Caza Furtivo de Quinta Generación (Caza\_Furtivo\_Era8)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS aviation combat asset, a Digital Age stealth fighter aircraft caza. Aerodynamic angular wing structure made of radar-absorbent dark grey composite materials, featuring dual stealth engine exhaust nozzles at the stern, and an enclosed internal weapon bay door underneath. Optimized for high-altitude flight simulation. Clean StandardMaterial3D textures. Pivot point at the absolute geometric bottom center of the fuselage body. The wingtip winglet tips and tail fin stripes must feature a solid mask zone mapped to the player team bando color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D high-speed jet aviation animation. Loops: 1. Runway Idle: Static wings, engine nozzles glowing with low orange emissive heat. 2. Flight/Move cycle (cruising extremely fast across the sky, generating a twin stream of thin white contrail condensation particles from the exhaust tips). 3. Attack Bombing OneShot: Internal weapon bay doors snap open, dropping low-poly guided missiles toward target ground coordinates before closing doors and executing a sharp banking climb animation away from the sector.

---

### SECCIÓN 4: BARRERAS ELECTRÓNICAS

#### 8. La Muralla Perimetral Láser (Wall\_Digital\_Mesh)

- **Prompt de Diseño 3D (Modelado):**

3D modular electronic fortification asset, a Digital Age laser perimeter wall fence segment. Composed of two vertical hexagonal posts made of white titanium alloy composite, embedded with advanced terminal nodes. The space between the two posts is filled by a flat, vertical semi-transparent energy grid wall mesh projecting glowing laser lines. Low polygon layout optimized for modular auto-tiling grid placement in Godot 4.3. StandardMaterial3D textures. Pivot point at the exact bottom center floor plane between the posts. The glowing energy barrier color channel must map directly to the player team color emissive slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular electronic wall behavior. 1. Placement state: The two vertical titanium posts beam down from space, flashing into the terrain grid with a small electric spark particle VFX. 2. Gate interaction (WallGate3D): The central semi-transparent laser energy grid barrier texturizada blinks and deactivates instantly to let allied units or vehicles pass through, cross-referencing the alliance matrix. 3. Destruction sequence: The laser grid flickers out, and the posts split in half with catastrophic sparks.

---

## MANUAL DE PROMPTS 3D: ERA NANO-FUTURISTA (ERA 9)

### SECCIÓN 1: PERSONAJES Y UNIDADES DE COMBATE

#### 1. Exosoldado Hacker de Red (Cyber\_Hacker)

- **Prompt de Diseño 3D (Modelado):**

3D stylized character, low-poly game-ready special operations infantry unit for RTS, a Nano-Futuristic network cyber hacker soldier. Wearing a sleek, bulky white titanium alloy exo-suit armor with glowing purple circuitry channels embedded across the chest and thighs. The right arm is heavily augmented with an advanced cyber-wrist computer device showcasing an active, semi-transparent neon holographic display panel mesh grid floating above it. Closed aerodynamic helmet. Clear A-pose, symmetric mesh. PBR textures, clean StandardMaterial3D. Pivot point strictly at the soles of the feet (0,0,0). Include an untextured color mask section on the chest plates for dynamic team color modulation in Godot 4.3.

- **Prompt de Movimiento (Animación / Rigging):**

3D character animation skeleton rig compatible with Godot SkeletonProfileHumanoid. Animation loops required: 1. Tactical Idle (holding the holographic wrist panel forward, tapping keys in a rapid loop, circuitry glowing). 2. Move blend (jogging forward dynamically at 4.2 m/s while keeping the terminal interface open). 3. Attack RPC OneShot (bracing stance, pointing the terminal at an enemy vehicle ships\_3d or Tower3D to channel the reliable RPC 'aplicar\_hackeo\_red' that flips factions PLAYER/ENEMY for 4.0s). 4. Hit reaction. All animations support linear interpolation blending (lerp) and Animation LOD switching.

#### 2. Humanoide de Plasma (Humanode\_Plasma)

- **Prompt de Diseño 3D (Modelado):**

3D stylized RTS heavy army unit, a Nano-Futuristic humanoid made of pure plasma energy. Silhouette is an elegant synthetic crystalline entity with floating outer carbon-fiber armor fragments on the shoulders and knees. Torso core houses a bright emissive photón energy core. Right hand features an integrated heavy plasma energy cannon arm with a hollow muzzle ring tip. Symmetric standing A-pose mesh structure. Clean PBR textures with high emission maps. Origin pivot set flat at the ground plane center (0,0,0). The floating armor plates must feature an unshaded texture mask for team color player distribution.

- **Prompt de Movimiento (Animación / Rigging):**

3D synthetic energy creature animation matrix. Loops required: 1. Energy Idle (body parts hovering slightly on a slow vertical sine-wave vector, internal plasma core pulsing with light). 2. Move blend (levitating or running smoothly across the terrain at 4.5 m/s). 3. Attack OneShot (raising the cannon arm, charging a bright cyan plasma sphere, and firing a high-velocity photón projectile with a deep recoil distortion). Blended smoothly using a 1D blendspace node.

#### 3. Soldado Antiaéreo Pesado (Soldado\_Antiaereo)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS army unit, Nano-Futuristic anti-air flak soldier. Wearing heavy powered composite plates armor, tactical magnetic boots, and a full tracking helmet with dual antennas. Holding a massive multi-tube electromagnetic rocket launcher weapon over the right shoulder, equipped with an integrated miniature tracking nano-radar screen on the frame side. Flat ground base geometry. Pivot point at the bottom center of the feet (0,0,0). The primary shoulder plates must feature a team color zone mapped to the player bando channel.

- **Prompt de Movimiento (Animación / Rigging):**

3D anti-air artillery infantry combat functionality. Loops required: 1. Tracking Idle (kneeling or standing, pointing the massive launcher tube upward toward the sky, searching for aerial objects). 2. Move blend (running forward holding the heavy launcher rig). 3. Attack OneShot (firing a synchronized volley of four micro-missiles with a sharp flash, applying a strict x4.0 damage multiplier exclusively if target belongs to groups 'drones' or 'flying'). Synchronized via network RPC parameters.

---

## SECCIÓN 2: EDIFICACIONES Y MAQUINARIA DEFENSIVA

### 4. Núcleo de Mando Levitante / Centro Urbano (TownCenter\_Era9)

- **Prompt de Diseño 3D (Modelado):**

3D low-poly RTS building asset, a Nano-Futuristic command core town center capitol. A hyper-futuristic monolith structure crafted from pristine white nanocomposite titanium plates, completely levitating 2 meters above the ground over active, glowing cian plasma propulsion rings. Features multiple rotating external orbital satellite dishes and vertical scanning laser lines projecting downward. Flat floor base geometry. Pivot point at the absolute floor plane center (0,0,0). Digital glowing faction flags on the metallic wings must use the player team color material slot with emissive PBR maps.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D quantum structure state animations. 1. Construction Phase: Hide final model, display 'Futuristic\_Scaffold' (a grid of laser emitter pillars projecting a semi-transparent cian wireframe holographic matrix grid of the command core layout) scaling vertically via Tween from 0% to 100%. 2. Active State: Entire structure floats up and down on a constant vertical sine-wave loop, plasma rings emit particle trails (VFX). 3. Damaged State: Metal plates warp and explode, emitting digital matrix glitch fragments when health is below 50%.

### 5. Estación de Control Climático (WeatherController3D)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly tech defensive building asset, a Nano-Futuristic weather control station and shield generator. Composed of a tall central hexagonal white titanium pylon pillar tower anchored to the ground, topped with a spinning multi-ringed quantum reactor core emitting bright cian neon particles. Projects a wide 40-meter horizontal sphere mesh dome outline. Low polycount optimized for mobile crossplay. Clean StandardMaterial3D materials. Pivot point

located at the absolute ground floor center (0,0,0). The support stabilization fins must map directly to the player bando team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D weather deflection shield animation logic. 1. Active Idle: Central quantum reactor rings rotate smoothly, projecting a pulsing translucent blue holographic shield dome using a looping Tween. 2. Threat Mitigation Alert: When an enemy Prophet3D environmental area disaster DoT enters the 40m radius, the shield dome instantly flashes into a fast-pulsing warning orange color texture, intercepting the damage data and reducing incoming DoT to a strict 0.20 (80% mitigation) for all allied entities inside.

---

### 🚢 SECCIÓN 3: LOGÍSTICA NAVAL, MECHS Y VEHÍCULOS LEVITANTES

#### 6. Mech Bípedo de Plasma (PlasmaMech\_Bípedo)

- **Prompt de Diseño 3D (Modelado):**

3D heavy sci-fi vehicle asset, a low-poly nano-futuristic bipedal combat battle mech walker. Standing 4 meters tall in game proportions, composed of a sleek white composite titanium armor chassis with two backward-jointed mechanical legs. Right arm is a massive embedded heavy plasma energy cannon barrel with a hollow cyan muzzle flare ring tip. Left arm ends in a heavy hydraulic combat claw gripper. Low polycount topology optimized for mobile Vulkan Mobile rendering. Pivot point centered at the ground plane between its feet (0,0,0). Outer armor panels must feature clean lines mapped to the team color mask.

- **Prompt de Movimiento (Animación / Rigging):**

3D bipedal heavy robotic vehicle locomotion and combat matrix. Loops required: 1. Mechanical Idle (standing tall, knees venting steam slightly, cannon arm humming with electric particles). 2. Walk/Move cycle (heavy, robotic backward-jointed walking loop, strides displacing the ground creating dust puffs at 4.5 m/s). 3. Attack OneShot (raising cannon, shooting an intense plasma shell that deals huge AoE damage). Added to group 'vehicles\_3d' for proper RPG multipliers.

#### 7. Transportador Nano-Futurista Levitante (Transporte\_Nano)

- **Prompt de Diseño 3D (Modelado):**

3D game-ready low-poly logistics vehicle asset, a Nano-Futuristic troop transport vehicle. Sleek, aerodynamic capsule-shaped dropship hull made of polished white titanium armor plates, featuring four under-mounted magnetic repulsión levitation discs emitting cyan engine glows. No wheels, completely floating above the terrain. Optimized for transport logic. StandardMaterial3D textures. Pivot point centered at the ground plane center underneath the hull (0,0,0). Side wing stabilizer stripes must map directly to the player team color.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D mobile transport vehicle logistics animation loop. Loops: 1. Idle (hovering gently over the dirt on a soft vertical vector sine-wave). 2. Move cycle (tilting forward dynamically, generating a

continuous blue light engine trail particle VFX behind its path while traveling at 9.0 m/s, ignoring small colisiones). 3. Cargo/Garrison state: Handles `rpc_cargar_soldado()` hiding up to 12 infantry meshes inside its array, and drops them in a safe radius upon `rpc_descargar_todo()` triggers. If destroyed, forces immediate emergency ejection of all surviving troops before deleting.

---

## SECCIÓN 4: BARRERAS DE ENERGÍA DE CAMPO QUÁNTICO

### 8. La Puerta Inteligente Cuántica (WallGate3D)

- **Prompt de Diseño 3D (Modelado):**

3D modular futuristic electronic fortification asset, a Nano-Futuristic quantum energy gate barrier segment. Composed of two towering vertical hexagonal posts constructed from pristine white nanocomposite titanium alloy, housing active terminal nodes. The perimeter space between the two posts is filled by a flat, vertical translucent energy field wall mesh projecting glowing cian grid pattern matrix textures. Low polygon layout optimized for modular grid connection in Godot 4.3. StandardMaterial3D textures. Pivot point at the exact bottom center floor plane between the posts. The glowing energy barrier color channel maps to the player team color emissive slot.

- **Prompt de Movimiento (Objeto / Estado Estructura):**

3D modular quantum gate behavior. 1. Placement state: The two terminal posts beam down from space, flashing into the terrain grid with a small electric spark particle VFX. 2. Gate interaction (WallGate3D): When an allied CharacterBody3D approach, the script detects the bando authority or alliance\_matrix; the central cian energy field grid flickers and deactivates instantly to let units pass through, automatically blinking back to true once they clear the zone. 3. Collapse state: The gate posts explode into digital ash particles.
